

Army Oil Formulae And Samples Stolen

By the Associated Press.

Star 8/12/40
BOSTON, Aug. 12.—A chemical laboratory reported today the theft of formulae and samples being used in experiments for the Army designed to synthesize low-grade oils with the properties of high-grade lubricants.

Andrew J. White, president of the Universal Chemists Corp., said the formulae were taken from a steel cabinet on the fourth floor of the building and the oil samples from an adjoining laboratory.

The laboratory was entered two weeks ago, but nothing of importance was taken then.
