February 25,

U.S. Department of Justice
 Office of the Director
 Federal Bureau of Investigation
 Washington, D.C. 20535

Dear Sir:

It is my understanding that the results of FBI spectrographic analysis tests performed on bullet fragments connected with the assassination of President John F. Kennedy have never been made public.

It is also my understanding that following completion of the tests (performed on Warren Commission Exhibits 399 and 842), the FBI informed the Warren Commission only that the bullet fragments were "similar in metallic composition".

Considering the importance of this test in determining or ruling out the existence of conspiracy in the J.F.K. case, I am writing to ask why the files relating to the spectrographic analysis have not been fully disclosed,

Sincerely,

L. Kartsonis
