

JFK assassination records appeals Harold Weisberg 2/29/80
— Files not searched (including for C.A. 75-226)

Attached 105-82555-1904 pertains to FBI Lab scientific testing for the Warren Commission. I do not now recall whether the note on p.5 was missing or whether it was not copied here.

Duplicate filing is indicated for two other files. Their numbers are not clear. One holds part of the number for the Commission file, 62-109090. Enough of the other number can be made out to make it certain that it is not one of the main files from which the FBI has made disclosures.

In this matter I have a long-standing request for all records pertaining to all scientific tests in any way related to the shooting and suspected shooting.

It is certain that I have not received all such records. I have found references to some that have not been provided in the JFK records that have been disclosed.

It appears that the file or files indicated on the attached record should have been searched to comply with my request and I appeal the continuing FBI refusal to do so.
