

JFK assassination records appeals Harold Weisberg 10/29/79
Files not searched - George Thomson

The FBI and I are in agreement, that George Thomson, a California engineer, is not rational. I don't know of anything he has said, written or published relating to the Kennedy assassination that is not insane. However, he has said and written much and has achieved considerable attention. He has fathered a number of lingering mythologies.

Of the many references to him and documents relating to him that have been disclosed, a number indicate other filing. The file numbers range from virtually invisible to illegible. A convenient illustration is the first record in 62-109060, Section 94, Serial 3916. This additional number, while not legible, appears not to be one of the usual assassination records file numbers.

I believe records not identical with those that have been disclosed in the general releases should be disclosed.
