

To Quin Shea from Harold Weisberg JFK Assassination records 3/25/79

If anyone ever cares about the truthfulness of FBI affidavits a check of 62-109060-7211, written to Dr. John Nichols by Tom Bresson, copies to Ms. Hauser and you, will disclose that the first attachment of the records relating to neutron activation analysis establishes that there was a test of a specimen SA John Kilty swore in my C.A. 75-226 was not made.

The specimen, Q 15, is from the windshield of the Presidential limousine.

Retired SA John Gallagher testified that this test does not destroy the specimen. I believe that Dr. Vincent P. Guinn gave the same testimony to the House assassins committee. (I am not certain that I cite Gallagher correctly but am with Guinn.)

Guinn also testified that when the container holding Q15 was given to him for testing it was empty - none of the specimen remained.

Another of those remarkable coincidences.
