To Guin Shea from Harold Weisberg, JFK assessmination records appeals 7/14/79 Dellas buildes Searches 67 files

Recently you wrote me relating to apparently missing parts of the B Sections of Dallas 100-10461. Nou said that files do get shifted, are sometimes destroyed and the FHI is not required to do ressearch for me. By responses included denial of the need for compliance to constitute research and that the FHI to the best of my knowledge is diligent and careful in its record booping while having its records arranged so that when it desires not to retrieve it doesn't. Supposedly it is forhidden to detroy any records relating to the JFX assaustination investigation.

Marilier appeals inlouis filing of JEX material elsewhere, including personnel files, as with Retired SA James P. Hosty, Jr. (Any review of the Hosty records I read discloses this bisarre filing and supposedly all are read before disclosure.)

Our priors ashbange related to the inventory of the Section B materials, a copy of which Dallas sent to New Orleans.

The attached sheet is from 100-10461-1815 part 1. The first entry, under Item #, reads "No Number." The description is of a registration card at a Dellas hotel for one Wa. W. Turner. This is William Weygrad(t?) Turner, an SA fired by Hoover, whose opinion of Turner is not all that different from the one I would offer is asked, which is not material to the appeal. (Turner has claimed to have done balok bag jobs.)

Please note not an the reference to the place in which this records is filed but that it also is attached to a report in that file that is relevant in the JFK investigation, dated 2/64, meaning 1964.

I believe that the real reason for the shifting to an uttarly irrelevant file is the potential for embarramement to the FHI from its surveillance of or other interest in a writer who was in Dellas collecting information for an article the FHI had reason to believe it would not like. I intend this to be illustrative and I'll provide some explanations and opinion. fired Turner was first years earlier. His writing relating to the JFK assessmention is not a personnel matter, the subject of the 67 file.

If by any chance according to FMI thinking that he has for breakfast is a personnel matter and investigation of his breakfast was part of the JFK assessmention investigation, then the records relating to the investigation belong in the file relating to the investigation - even if the FMI has a file on Turner's breakfasts, past or present.

When the FH pulls filing stants like this it is not asking the FHI to do research to undo its twicks with filing. All records relating to the FHI's investigation of Tunner in Dallas belong in the JFK investigation file. (This one happens to be their Oswald file, which also is a bit wierd.)

Unless it beers special notations I have no interest in a copy of the registration. I do have an interest in any and all records sighiled in the 67 series that belong in the JFM association files. I an very int excepted in what the FMI found it right and proper if not also necessary to do about these she daned be critical of its work, including ns. (This also suggests means of its not retrieving records relating to no.)

So you can approxiate the importance the FMI itself attached to this I remind you of prior appeals which include records reflecting the fact that the FBI did not consider it worthabile to interview a single one of the Dallas motorcycle police escort, trained and close observers. If it did not take time for this and did take time for Termer obviously it regarded the Termer investigation as relevant and important.

So why remove any records from the investigation file and place them in his by then very <u>non</u> "personnel" file? Or why not place copies in the \$7, which was less work?

When the FOIA processors saw the shift to 67-455829 should they not have searched that file in processing recents in an Masterical case? I think so.

I readed you that I request by subject.
