

JFK assassination records appeals
Worksheets, records searched and provided

Harold Weisberg 9/27/79

The fact that the worksheets do not conform to the files allegedly searched for compliance is clearly stated by the FBI itself on the attached worksheet for Section 3 of 62-109090, the Commission file. In black capital letters and with exclamation points it is stated that "THIS INVENTORY SHEET DOES NOT ~~CORRESPOND~~ CORRESPOND WITH THE RAW FILE SEQUENCE..."

Among the questions raised are those of more than a single file, one not corresponding with the other, and of withheld records.

In connection with withheld records I have now examined the entire 62-109090 file as provided to me. As provided to me it does not include what a reporter asked me about when he examined the records his newspaper obtained. A record to which he referred and from which he quoted Director Hoover's notation is not included in 62-109090 as provided to me.

Then House Majority Leader and Warren Commissioner Ford was an FBI informant inside the Commission, through DeLoach.

In a note added Director Hoover referred to Ford as a "toad."

No such record is in 62-19090 as provided to me.

Of course this is an important historical record. And of course I want it.

To comply I ask for a search of the Ford entries in the 94 and similar files and for all Ford records included in this and similar files. I do not regard this as a new request. I also do not know the identifications of all DeLoach files but I mean them all to be included.

For your information the FBI did have confidential Commission records, some not existing in the Commission's files when they were turned over to the Archives. At least one of these was not available to the staff of the Commission. Neither this record nor the copies the FBI also had of the earlier drafts of the Commission's Report are included in 62-109090 as provided. This means that they are in other files and remain withheld by tricky filing.
