

History of the disease and general anamnesis

Admitted with complaints about suppuration from the right ear and weakening in hearing. The ears have ached since childhood. At the age of 10-12 an anotomy of the left ear was performed. The right ear periodically became inflamed. Was under observation of a laryngologist. During the last 10 days the suppuration from the ear increased. He called on a laryngologist and was sent to the laryngol. hospital for treatment.

He does not mention any previous diseases [any word missing] and denies having had any venereal diseases.

Examination of the ear, nose and throat

Right ear: oscula auricularia is not changed.

Defect [of the tympanic membrane], pus in the acoustic duct, growth of granulations.

[Mastoid process] painless, cholesteatom is visible in the upper part.

Left ear: Behind the ear is a stable post-operative scar, the tympanic membrane is grey, somewhat pulled in, diagnostic points are pronounced.

Nose: Nasal ducts clean, respiration free.

Pharynx: Adenoids II = 1.5

Larynx: Pharynx clean, tonsils not enlarged, no pus. Swallowing painless.

Larynx: normal. Voice clear, respiration free.

History of present illness

Oct. 21 The patient was brought by ambulance into the Admission Ward of the Botkin hospital and further referred to King. [or King] No. 26.

According to his statement in the Admission Ward — with the aid of an interpreter — the patient arrived a few days ago in the Soviet Union as a tourist for the purpose of obtaining Soviet citizenship and remaining in Russia. For this reason he had been saving money for 3 years, and applied to the Supreme Soviet of the U.S.S.R. He did not receive a definite answer and on Oct. 21 was supposed to leave for his home country. In order to delay his departure he inflicted wounds on the lower third of his left forearm and put it into hot water. He lost consciousness and at 16.00 [4 p.m.] on Oct. 21, was brought to the Botkin hospital where he was examined by the surgeon and bandaged.

He was examined by a psychiatrist. [He spent] three days in the psychiatric ward for observation. According to the conclusion of the expert, the patient is not dangerous to other people and may stay in the somatic department. By order of the assistant to

the chief physician he was transferred to room No. 7. General condition satisfactory. Respiration in the lungs is vesicular. Heart is normal. Pulse is rhythmic [illegible] RR $\frac{17}{73}$. Liver and spleen not enlarged.

Oct. 23

The patient was brought to the admission ward of the Botkin Hospital by ambulance and was ordered by the assistant to the chief physician [Dzhanikova ?] to be transferred to Ward No. 7. [2 words illegible]. Incised wound of the first third of the left forearm with the intention to commit suicide. In the admission ward sutures were made. On Oct. 27 he was examined by the surgeon. The healing of the wound was done by first intention. . With surgeon's permission, discharged from hospital. The interpreter who was with him every day (from the Embassy?) was informed ahead of time. The condition of the patient is satisfactory.

The patient was admitted to Botkin Hospital on Oct. 21, '59. He was brought to the hospital because of an incised wound of the left forearm. The wound is of a linear character with sharp edges.

In the admission department he was given primary treatment of the wound and skin sutures.

The character of the injury is considered light without functional disturbances. The patient is of clear mind, no sign of psychotic phenomena.

He explains his attempt to commit suicide by the fact that he arrived from the USA in the Soviet Union on a tourist visa with the first intention of staying in the Soviet Union. Not having the opportunity to realize his intention because of circumstances beyond his control, and having to leave the Soviet Union on Oct. 21, 1959, he tried to cut the blood vessels of his left arm on the same day.

During his stay in the [admission] department, his attitude was completely normal. He insists that he does not want to return to the USA.

EPICRISIS

Examined in the department of [plastic] surgery. He was admitted to the hospital with complaints (according to the interpreter) about [one word illegible] wound in the lower third of the left forearm from the inner side.

Inner organs show no [injuries ?] [one word missing, one illegible] In the region of the lower third of the left forearm there is [a wound] of linear character with sharp edges, 5 cm. in length. Performed under local anesthesia 1/4 % [one word illegible] novocaine 3 20 [?] [illegible]. Primary surgical treatment of the wound was performed with 4 stitches and aseptic bandage. The injury does not reach the tendons.

[Signed] Markin

Psychiatric examination

A few days ago [the patient] arrived in the Soviet Union in order to apply for our citizenship. Today he was to have left the Soviet Union. In order to postpone his departure he inflicted the injury upon himself. The patient apparently understands the questions asked in Russian. Sometimes he answers correctly, but immediately states that he does not understand what he was asked.

According to the interpreter, there were no mentally sick people in his family. He had no skull trauma, never before had he made attempts to commit suicide. He tried to commit suicide in order not to leave for America. He claims he regrets his action. After recovery he intends to return to his homeland.

It was not possible to get more information from the patient.

Suicide attempt. Transfer to ward No. 26

Maria Ivanovna Mikhailina [?]

Oct. 22 According to the translator;

[The patient] arrived from the USA on Oct. 16 as a tourist. He graduated from a technical high school in radio-technology and radioelectronics. He has no parents. He came with the intention of acquiring Soviet citizenship. In this matter he turned to the Presidium of the Supreme Soviet, USSR. He did not receive a definite answer and was supposed to leave in [2 words illegible]. On Oct. 21 he was found unconscious in the bathroom of the Hotel "Erlin". His left arm, injured by a sharp instrument, was lying in hot water. The ambulance was called and he was taken to the Eotkin Hospital.

He had saved money for three years to come to the USSR and to remain in the Soviet Union forever.

His mind is clear. His perception is correct. He remembers how he wanted to commit suicide by cutting his veins with a razor blade and putting his blood-stained hand into hot water. Now he is sorry for the attempt to commit suicide.

RUSSIAN EMBASSY
WASHINGTON,
D.C.

- V -
ATTENTION MARINA NIKOLIEVNA CSWAK
NEW ST. A. 2703 MERCEDES ST.
FORT WORTH, TEXAS

Dear Sir,

In regard to my wife's Russian passport,
N. RU 37790, which we sent to your embassy
on July 20th for registration as is required
by your law.

We have not received this passport
back as yet, please look into this.

also, please give me information as
to how I can subscribe to "Prava" or "Izvestia",
Russian language newspapers or some other
Russian language magazines such as "Ogonyok".

I assume you have received my
wife's passport, and will return it after the
registration of her address.

I would like for the Embassy to
send us any periodicals or literature which
you may put out for the benefit of your
citizens living, for a time, in the U.S.A.

Thank you
Sincerely,
Bill Brown
