GENERAL FIRST AID DIRECTIONS

WOUNDS are easily lacerated but hazards may be reduced if the following instructions are observed: (1) Wash hands with soap and water. (2) If it is a deep laceration, use rubbing alcohol. (3) If it is a burn, use Epsom salts, benzine, turpentine, kerosene or other disinfectant. (4) If it is a fracture, use a splint. (5) Apply 3% iodine, or similar antiseptic agent, let dry, then cover with sterile gauze dressing. FRACTURES can generally be treated by the following: (1) Pain and tenderness may be pronounced or absent. (2) Swelling and discoloration may or may not be present for several hours. (3) Fractures, bone may or may not protrude through skin wound. CAUTION: If fracture is suspected, handle with extreme care, as large nerves and blood vessels run close to bones and may be cut by sharp edges. Always splint before moving. BLEEDING should be checked as rapidly as possible. Loosen clothing and keep person warm with external heat. Give no stimulant until bleeding can be checked. CAUTION: Tourist, while every 15 minutes. SNAKE BITES: Cut X about X inch deep where fangs entered flesh so that poison may be drawn away by bleeding. Apply tourniquet between wound and heart, 4 to 6 inches from wound. CAUTION: Do not give any stimulant. DOG AND ANIMAL BITES: Wash with soap and water, and rush to doctor. Do not bandage or bleed. BURNS AND SCALDS: Cut clothing away without tearing or pulling. Do not try to remove clothing or dirt stuck to burned area. Apply warm baking soda solution (2 to 3 heaping tablespoons to 1 pint of warm water) or Epsom salt. Never use turpentine, benzene, kerosene, or other oil. Cover burn with plaster. ACID BURNS: Wash liberally with water until chemical is removed, then treat as other burns.
