

King assassination records appeals
Abstracts

Harold Weisberg 3/31/80

As provided to me it is represented that the FBI could not find any abstract for Serial 1110, which is attached. The reason is that it was misfiled, as the FBI appears not to have detected in processing the abstracts. I have informed the FBI of another instance of this.

If the FBI and Department counsel did not get hung up on their misrepresentations and then try to will them into reality they would not have as many missing abstracts because they could find them in the ~~the~~ duplicate filing they pretends does not exist.

The duplicate filing is chronological rather than numerical.

Absent any representation that the second set was searched I appeal the failure to search it for copies of any abstracts missing from the numerical filing.

FBI Lab Report. Examination requested on
document - Microscopic by LA, LV, PH.

DJ counsel Bill Cole kept referring to the abstracts as "#cards," which they are not, as this xerox shows. Why he did this I don't know but he persisted in the incorrect description after I established that a duplicate copy was made for duplicate but chronological filing. Perhaps to avoid having to produce the chronological set, as a record in itself, separate from the numerical listing?
