# Pocton Says rilms Back Warnen Report

By PETER KIHSS

X-rays and photographs takes during the autopsy of President Kennedy verify the location of a disputed wound at the base of the back of his neck. But by themselves they cannot end the argument over a bullet's path through his body.

This was the opinion yester day of one autopsy surgeon who has seen the X-rays and photographs, which were put into the National Archives Oct. 31. It is also the private opinion of two investigators for the Warren Commission.

Warren Commission.

In a telephone interview from Bethesda, Md., Dr. J. Thornton Boswell, a retired Navy commander now in private medical practice, said he and the chief autopsy pathologist, Capt. James J. Humes, agree the pigtures cannot prove the so-called single-bullet theory.

#### Single-Bullet Theory

This theory holds that one the President's neck, passed through and emerged at the lower left part of his tie knot and then wounded Gov. John B. Connally Jr. of Texas in the chest, wrist and thigh. Warren report said there was "persuasive evidence" for the single bullet theory "although it is not necessary to say essential findings."

The commission held that Lee Harvey Oswald alone assassi-

Harvey Oswald alone assassi-nated the President, firing three shot in less than eight se including one probable miss. If the President and Governor the President and Governor were wounded separately, questions of timing and the possibility that there were two rifles have been raised by critics.

Dr. Boswell said yesterday have been photographs for the photographs for the land way.

now reday he said the accu-mey of the autopsy report and of the autopsy surgeon's testimony as to the location of the wound.

an Error in 'Hasty' Diagram

in Error in Hasty Diagram in Tt was his diagram, Commission Exhibit 397, Dr. Boswell said, that critics of the Warren Commission have cited in arguing that the wound was farther down the back. He said this hasty "work sheet," made during the autopsy, had a "diagram enger"—a dot that placed the wound incorrectly. But he said the notes he wrote on the diagram did locate it accurately. the notes he wrote on the dia-feram did locate it accurately.

The tracing of the bullet's fath must still depend on medi-eal interpretation because it then through soft tissues and muscles, Dr. Boswell said. These Were bruised, he said, but the bictures do not conclusively show the path, of the total

Dr. Boswen said of the dia-

"This was unfortunate." If I had known at the time that this sketch would become public record, I would have been more than the sketch would have been more work. sheet, the same as rough work ing notes. You could see that by looking at it. It was very dirty.

"Its sole purpose was to indicate for the autonsy doctors."

right, left, front, back—things like that. The photographs were to provide the exact visual pages of the control of the contro description."

#### 'Absolutely No Doubt'

Autopsy surgeons have "ab-solutely no doubt in our minds now" that a single bullet hit both President Kennedy and Governor Connally, Dr. Boswell

Dr. Boswell said Federal Bureau of Investigation reports used by the critics were "simply wrong." The F.B.I. gests passent during the autopsy were

"not trained in medicine," he said.

2 F.B.I. spokesmen have said the agents' reports covered discussions that took place during the autopsy. The reports did not take in the final autopsy report, the bureau said.

In the report, the surgeons after having spoken the next

morning with a Dallas hospital surgeon, concluded that the ballet had gone out through a hole in the throat, which had been obliterated by an emergency operation.

The Warren Commission published "schematic drawings," done by a Navy medical illustrator and based on measurements and verbal descriptions given him by the autopsy surgeons just before they were galled to testify.

### que Downward Path Shown 32

The drawings include Commission Exhibit 385, which shows the downward path the builtet is thought to have taken through the President's neck, and they remain "sufficient to illustrate the finding," Dr. Boswell said yesterday.

Dr. Boswell noted that his diagram, which differs from

Or. Boswell noted that his diagram, which differs from Exhibit 385, included his hand-britten notes of the specific massurements. These fixed the disputed wound at 14 centimeters, or 5½ inches, from the right acromion process, the tip of the right shoulder joint, and

14 centimeters below the tip of he right mastoid process, ony point immediately behind he ear.

## Hole Below Shoulders

"In his book "Inquest," Edward Jay Epstein had cited the ward Jay Epstein had cited the diagram as indicating a wound higher in front than in back. It his first Viking Press edi-tion, Mr. Epstein gave the to the an F.R.I. summary repor-

blaced in the national archives which said medical examinati had reported a bullet enterior the President "just below his shoulder."

In a later Bantam edition Mr. Epstein added an F.B.I. report that said Dr. Humes located during the autopsy an apparent bullet hole "below the shoulders."

if The end of the opening could be felt with the finger" and Dr. Humes had offered an opinion that the bullet possibly "worked its way-out of the body during externity cardiac massage," the report said.

the report said.

"The the current Esquire magaraine," Mr. Epstein wrote that
there was a "flagrant contrarainction" between the autopsy
report and the F.B.I. agents
report. Mr. Epstein argued that
ray viewing the photographs
the contradiction can be resolved once and for all time,"
"According to Volume 2 of the
Warren Commission documents According to Volume 2 of the Warren Commission documents; In Humes reported that X-rays and photographs had been made before and during the autopsy. He said the physicians studying the "wound in the lower posterior neck of the Prestdent" had "examined carefully the bony structures in this vicinity as well as the X-rays these if there was any evidence of fracture or of deposition of metallic fragments." They saw none, he said.

Brulses Photographed

#### Bruises Photographed

Dr. Humes testified about bruises and discoloration on the upper portion of the right lung and reported hat "Kodachrome photographs were made of this

area in the interior or the Fresident's chest."

He testified that the black and white and the color negatives hade during the autopsy were not developed before they have turned over to the Secret Service.
