FILE (89-43)

11/23/63

Bullet from body of Officer TIPPETT, a copper coated lead bullet of .33 special caliber is so badly mutilated, there are no markings on its surface to permit identification of weapon from which fired. However, it was determined that OSVALD's revolver is most likely source producing rifling impressions of ASSASSINATION OF PRESIDENT as those present on fatal bullet.

KENNEDY, 11/22/63

APO report of results to date directed to Dallas Police Department being hand carried to Dallas by ERAL tonight.

Assistant to the Director BELMONT at 5:20 PM today furnished following information:

Bullet recovered from stretcher in hospital by Secret Service, two bullet fragments recovered from President's automobile by Secret Service and two cartridge cases delivered to Laboratory by SA DRAIN, your office, identified as being fired by submitted 6.5 millimeter Mannlicher-Carcano rifle delivered by SA DRAIN. Several black cotton, orange yellow cotton, and gray black cotton fibers which matched similar fibers composing OSVALD's shirt removed from butt plate of submitted rifle. No fibers found on gun which could be associated with green blanket. Single brown viscose fiber and several light green cotton fibers which match similar fibers present in composition of green blanket found on paper bag. Cotton fibers from gun are same colors as cotton fibers composing shirt; however, due to limited number of colors in shirt (3), not possible to state shirt is positively source of these fibers.

Identification Division determined that latent prints appearing in photograph taken of the rifle of Dallas Police Dept. too fragmentary and indistinct to be of any value for identification purposes. Similar photo taken by Bureau also failed to produce prints of sufficient legibility for comparison purposes. Latent fingerprints developed by Identification Division on brown paper bag recovered at scene and marked "Found next to 6th floor window gun fired from may have been used to carry gun. Lt. J. C. DAY" also identified with left index finger impression of LEE HARVEY OSVALD. In addition, one latent palm print developed on paper bag identified with right palm print of OSVALD.

No latent prints of value developed on the revolver, cartridge cases, clip, inner parts of rifle or unfired cartridge.

Bullet from body of Officer TIPPETT, a copper coated lead bullet of .38 special caliber is so badly mutilated, there are not sufficient marks on its surface to permit identification of weapon from which fired. However, it was determined that OSWALD's revolver is among those weapons producing rifling impressions of the number, type and size as those present on fatal bullet.
