

Hal's Notes re: Bronson film

DI never sent B film to FBIHQ. Meant that FBIHQ would do nothing about it. It also meant that WC would never see the film.

B films shows JFK being killed. Shows the pres. Being killed. One film was 8 mm and the other was Leica 35mm. Both were of high quality.

8 mm. From Houston

35 mm from the grassy plot that shows JFK being killed.

Use: Knowing witnesses where they were located at time of shooting. With Brennan it shows that he was not where he said he was. Could not see what he said he saw.

So B. film is in league with Z film.

as known as the Z film

Shows the picture of the presidential limo and their position when shots were fired.

Since he was an engineer it is reasonable to assume that he took them with care.

Pictures came out in 1978 under FOIA (Hal's suit). Finally appeared in the DI Morning News. Pxs are clear despite critics who say they are too fuzzy. They are clear enough to show that there was nobody in the sixth floor window. There are 87 frames of that window alone (some 4 to 5 seconds).

FBI cover up is the point.

Bronson offered the FBI the films.

Newsome reports. Two pages before he went to see the films. One page after he saw the films. Quote from the 2nd report. Give us Oswald with smoking rifle or forget it.

In any real investigation to be able to identify witnesses who saw the actual killing and where they were located would be invaluable in any authentic investigation.

Px of the limo a broadside when JFK was hit w/ 35 mm.

Katzenbach memo

Chronology:

12:30—1:00 Oswald was dead No trial no cross-examination.

Check w/ NA on K memo.

Presidential phone logs

Tracks thru the phone calls that evening. K discussed w/ C. Evans. K's holograph on Sunday afternoon. He has the memo typed on Monday morning.

Speculates that he discussed the whole memo w/ Moyers and only the first part with Hoover.

Evidence was such that O would be convicted. They had no proof that 399 was fired from the Oswald rifle at the time of K's memo.

Hal has xerox of the Bronson films. Check with him on that.

Gary had enhancement by MIT. They backed out and returned the films.
