

Notes w/ Lecture

## SOME NOTES ON CD-1

How many volumes? I think there were 5.. . Below notes from Hal affidavit on August 23, 1977. . . .

Any careful read of CD-1 reveals that there are marked deficiencies in the evidence. For example, the shortest single chapter in the Report (32 pages) is titled "The Assassination." CD-1 in entirety is about 900 pages in length .

07  
Calculation length  
of Doc.

P. 124 . . . Hal notes that FBI agent John F. Gallagher was agent in charge of forensic testing of weapons . . . . None of these results can be found in the FBI's CD-1 or in the Warren Commission Report. . .

6 explain  
why  
date

Gallagher does not enter into the public record until 9/15/'64 and during his appearance he was not asked a single question about any of the scientific tests used in determining whether Oswald fired a rifle or not. . .

I might add here that the FBI turned out its Report on the JFK assassination (CD-1) without ever asking for a copy of the Kennedy death certificate. The FBI got around to acquiring this document weeks after it released CD-1 and after "Leaking" the conclusions of its investigation to favored press people from the get-go . . .

Add here that the Warren Commission never asked for a copy of JFK's death certificate. . . . (Had it requested a copy it would never have been able to insist that the fatal shooting that day composed of three shots: Two hit JFK in the back and one missed going down range and struck a curb stone sending concrete splinters into Jim Tague's face.

In short: Here we have the WC concluding that there were 3 shots fired with two hits and one miss.

With the FBI, the investigative body of the assassination, the Bureau insisted that there were three shots: Two hit JFK and one hit Connally.
