

Q

Key Notes Walker

Folder ***** Walker Shooting/ Key Evidence that Exonerates Oswald

1. Report by Mike Clark and Robert Smith 3/31/1971

RG 64 NARA

Files of Marion Johnson and Mike Simmons, 1963-1977

Box 31

Folder: Committee to Investigate Assassination

FBI in Dallas FBI

This report makes three key points:

1. Notes that the Dallas police reports describe the Walker bullet as steel jacketed. See CE 2001, 24H39-40 . . . Its copper jacket was not described as such until the FBI took possession some 8 months later. 24H46-47!!! This was Day's work; was he persuaded by the FBI or did FBI just lie outright.

Steel jacketed changed to copper

Day to the Rescue again

2. Make argument that microscopic rifle markings could have been matched with K1. . . .

according to Walker he also investigated the slug

3. The identification markings on Q188 were supposed to have Norvell's, Day, Frazier and Nicol. . . .as as chain of evidence was concerned. . . . But their report states that microscopic examine showed only Day's initials on the Walker bullet. ***** Gotcha Day*****

4. They concluded that the bullet alleged to have been recovered at Walker's house and brought into evidence was in fact not that authentic bullet but a substitute. Agrees with Walker*****

note - Day to the Rescue - lifts Oswald's prints off the body on 11/24/63
- Day who notes Oswald's father's Red Bell in the TSBD warehouse - But NOT of Oswald's prints
- Finally, - Day who writes Walker Bullet as copper jacketed
