Examination Requested: Determine if nitrates are present on Exhibits #1, 2 and 3.

Requested by: Dallas Police Department.

Result of Examination:

No nitrates were found on Exhibit #1.

Nitrate patterns consistent with the subject having discharged a firearm were present on Exhibits #2 and 3. The pattern on Exhibit #3 is typical of the patterns produced in firing a revolver.

Method: (2) Diphenylbenzidine test.

Date: 11/23/63

Report to: Lt. J. O. Day

Specimen to: Discarded.

Exhibits: Sketches of nitrate patterns of casts.

Exhibit No. 35

The paraffin test taken of Lee Harvey Oswald, November 22, 1963. This routine test is designed to show if nitrates are present on a subject to verify that he has discharged a firearm. Oswald had a nitrate pattern on his hand consistent with the allegation that he fired the revolver which killed Officer Tippit. A paraffin test taken of the right side of Oswald's face did not reveal any nitrates from having fired a rifle, thus offering no proof that Oswald had recently fired a rifle.
