Memo to Mr. Belmont from Rosen Re: Assassination of President

Les mitset

During this session Commander James J. Humes advanced the theory, that the first shot entered the President's body in the rear in the neck region 📡 a few inches below the head and followed a pattern through the neck and exited. in the front without encountering any bone or other objects which slowed the bullet to any degree. Commander Humes was of the opinion the bullet continued and struck Governor Connelly in the back on the right-hand side below the shoulder and exited on the right-hand side of Governor Connelly in the chest area. Commander Humes stated that here again, based on medical reports received from dictors in Texas who examined Governor Connelloy, the bullet met with no serious obstruction and passed through the body, merely grazing one of the rib bones. It was Commander Humes' opinion that the bullet from the first shot apparently lodged in some manner in the clothing of Governor Connelley and this bullet is the one which was found on the stretcher on which Governor Connelly was brought to Parkland Hospital in Dallas, Texas. Commander Humes states this bullet was not damaged in any way and it is for this reason he feels that the first shot definitely passed through both the body of the President and Governor Connelley.

prove to wow wo spale you.

In explaining his feelings concerning this theory, Commander Humes stated that another shot is believed to have hit the right wrist of Governor Connelley with such an impact that it caused the bullet to break into many fragments and he noted that many fragments were found in the right wrist area of Governor Connelley as well as in the thigh of the left leg.

Relative to the third shot which was fired, which based on the photographic material available is believed to be the one which hit the President's head, Commander Humes addised that there is no question that this bullet separated into many fragments upon impact and many fragments were found in the skull area of the President. He noted that one fragment had apparently struck the front windshield from the inside inasmuch as the examination of the windshield did detect some lead deposit where an object had struck the inside of the windshield. Commander Humes states that the fragment which struck the windshield could have been from this shot which struck the President's head or could have been a fragment from the shot which hit Governor Connell fy's wrist.

The other doctors present did not completely confirm the theory of Commander Humes but felt, based on their review of the pictures, noting the movements of Governor Connoll/y in the President's automobile and the general location of the occupants in the car, that there was a possibility this theory was correct. Confirm

in the car, that there was a possibility this theory was correct. AC22 Staff members of the Commission gave no indication what additional action they planned relative to this theory. It is noted that any comments made in the past by the Bureau relative to the shots that struck the President and Governor Concolly were based completely on medical reports furnished the Bureau by Doctors at Parkland Hospital and the results of the autopsy of the USA Naval Hospital, Betnesda, Marylan EUCLUSUINT
