take 31 --	5.9 seconds	one hit, one blue, one nowhere
take 32 --	4.3 "	not sure if any hits.
take 33 --	no time	jam after 2d shot.
<u>fastest time</u> take 34 --	<u>4.1 seconds</u>	one hit, two complete misses (off blue)

11. Charles Hanby, H.P. White employee

take 35 --	no time	jammed
take 36 --	no time	jammed
take 37 --	6.5 seconds	two near misses, one nowhere.

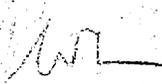

SUMMARY:

These riflemen used various techniques; some took the rifle off their shoulder more than others. No one liked the scope.

Out of 37 attempts to fire three shots at the moving target, only 20 record times were taken. In the other 17 cases, either a bullet jammed in the bolt-cycling process, ~~was not~~ for no time whatsoever, or the balky bolt slowed him up so much that the target completed its run before the rifleman could get off his third shot.

The average time, out of 20 recorded attempts, was 5.6 seconds.

Fastest was 4.1; slowest, 6.8. Times are approximate; we can get them down to hundredths of a second if desired when applying superimposed timer.
