1

H. S. AIKEN, Leadman, Texas School Book Depository, 411 Elm Street, Dallas, Texas, was interviewed at his place of employment.

AIKEN, who is commonly referred to by his nicknams "STEVE", advised that he keeps the daily employment records of the warehouse employees. He stated the employees do not use a time clock to record their time of arrival, departure or time taken for lunch. He stated that he is advised in the morning as to who is at work and at the end of the workday who is still at work. The normal workday consists of eight working hours.

AIREN stated that no notation of any sort is made of the time an employee takes his forty-five minute lunch period, that is, the employee's time of departure for lunch and the time of his return.

AIKEN noted his time record for LEE HARVEY OSVALD indicates that during the week of November 4 through November 8, 1963, OSVALD was credited with having worked eight hours each day from Monday, November 4, 1963, through Friday, November 8, 1963.

AIKEN stated that if an employee was gone for a period of time much longer than the employee's forty-five minute lunch pariod, he would have reported this information, and the time would have been deducted from the employee's pay for the day. In OSWALD's particular case, there had been no notation that OSWALD was gone for lunch on either November 6 or November 7, 1963, for any extended pariod of time in excess of his normal forty-five minute lunch paried, and AIKEN would surmise that OSWALD had not overstayed his lunch paried on those days.
