Was the President's  
killer insane?

# THE TRIAL OF THE ASSASSIN GITEAU

CHARLES E.  
ROSENBERG

Now, told in full for the first time, the gripping story of the most celebrated "insanity trial" of the past century. It all started when the shabby little man sprang forward in the railroad station and shot James Garfield in the back. Was the President's killer, who all through his trial insisted that it be kept "high-toned," an egomaniac? Or was he sane and carrying out orders? Rumors of conspiracies were rife as the battle raged between two schools of psychiatry in this immediately pre-Freudian era. The verdict, however, changed the course of medical and legal thinking. This brilliant resurrection of almost forgotten pages from history

"should be required reading for the more rabid demonologists of the Kennedy assassination . . . more than a fascinating account . . . it has significance in the history of psychiatry and jurisprudence." **EMER GERTZ, Book Week** With contemporary photos and holograph tableaux. \$5.95
