12 June '68

Dear Sylvia:

You will note from the copy of my original mss sent you this morning, that I wrote:

'Prior to microscopic examination, "it was washed with Hydrosol, a blood solvent" thus...'

This is an exact quotation that I got at the Public Library in Albany while examining the "Hearings." I think that there was a separate volume (?) that was the FBI Report(?).

At any rate, it is a matter of distinct memory with me; unfortunately, after many years of conservative statements I am rarely asked to prove references- and have, unfortunately, become somewhat lazy about footnotes.

Incidentally, I also remember that the Parkland bullet (that was found ON THE FLOOR) arrived in Washington in advance of most of the other firearms evidence; and that seemed somewhat unusual.

C o r d i a l l y ,

Shelley Braverman
