

Acoustical evidence means 3 not 2 riflemen

- 1 on grassy knoll. 1.6 seconds between 1st 2 shots  
= 2 shooters. Moreover, shots are placed as  
Z 157-161 188-191 all behind fence except  
one frame (186)

Back wound is admitted to be anatomically lower  
than presumed exit in anterior neck - which destroys  
SBT (regardless of ballistics and other scientific  
evidence all based on probabilities).

Simply not credible that stretch bullet did what  
is ascribed to it - no such bullet ever produced in  
any reenactment done (4 WC and by Dr. Nichols)  
and HSCA refused to do experiments - prepared to  
indulge in circular reasoning - bullet did it,  
therefore, it is possible.

Federal agencies <sup>and others</sup> successfully stonewalled HSCA -  
receipt for a missile removed by Dr. Humes became a  
"mistake". FBI memo purging agents "have listened  
to a recording of his voice" became a mistake.  
Recollection of Adm. Osborne that a slug (bullet)  
rolled out when the body was unwrapped  
also became a mistake.
