Dear Sylvia :

I trust this finds you well and still working at WHO was it not at the UN???

I have embarked on a book called The Shots in Dealey Plaza : Evidence of Conspiracy .. it will be privately printed obviously .. it will have 41 'figures' most of them being diagrams which I'm now drawing .. I've run into a problem which I'm sure you know the answer to .. my reason fro writing is enlist your knowledgable help ...

CE 840 and CE 843 are fragments but I don't know eher they were picked up ..

I think maybe one was under Connally's or Nellie's jump seat .. do you know ??

Penn's editorial the other day said Nixon and the Syndicate just tried to get too much of the pie away from the Pentagon .. how's that for an historical evaluation ...he is still turning up new 'dope' and good...

CE 840 consists of three small lead particles lying on the rug in the rear seat area. See IV p. 66.

CE 843 consists of two metal fragments removed from the head of the President. See IV p. 73.

Regards

Sylvia
