

Visit for Dr. John Nicole

Sunday 2/23/69 5:30 - 7:30 pm

Did not know my position on
g. Conceded, very hard deal
2 g. Did not permit him
offer in evidence results his
ballistics experiments because
did not grasp meaning -
cut of his testimony after 2
ques, on grounds too much
time being spent Dealey Plaza
evidence. Hopes return
& testify after defense rests.

Gave me copy his brief
in fact vs just to get access
autopsy photos clothing and
height of JFK seat, jumbo seat,
which refused him by
FBI etc. JETT no longer
reply his letters or wires.

showed about 40 slides his
tests = WCC 6.5 ammo +
M-Carcano rifle. Velocity is
such that can penetrate
equivalent 4 men and
emerge pristine. Therefore TN
projects this 399 had little
velocity left when emerged
from wrist.

In fact 399 is grossly
deformed! at back, instead
of intact  as in all TN
test bullets include those
grossly deformed at nose
399  which TN could
not duplicate even by placing
under stretcher leg and
sitting (225 lbs) on stretcher.

Had great difficulty getting
boy WCC 6.5 ammo - had to
adventure for it.

Shires goofed on bullet
project Gox C though. Do not
in bone - is just under
skin - probably button project
or the like - other PHT dros
covered up for Shires.

PHT just seemed agreeable
show JN Gox C X-rays, then
said X-rays were "lost."
But JN has copies. Can
expose PHT dros. as perjurers.

JN work on back wound
for Foreman - shows and not
original 6 ft wound
could not proceed hit Gox C.

In fact, burden his research
is - Carcano not used at
all, any of the shots or wounds.

to bring & view to subjecting
399, fragments, metal traces
docking, etc. to neutron
activation test.

Wants know if partition
between driver & passenger
compartments JFK car was
armored.
