## JFK autopsy photos said to be fakes

Sun Staff Correspondent

New York-A photo technician hired by the House Select Committee on Assassinations to analyze film related to the assassination of President John F. Kennedy has concluded that four of the Kennedy

autopsy photos are forgeries.

Robert F. Groden, a photo-optics technician who served as consultant to the committee, said he has evidence "that raises grave doubts about the authenticiy" of materials relied upon by the House committee and three earlier investigations into the Kennedy assassination.

The Sun was shown a copy of his writen conclusions, which will be included in the final version of the committee's report

to be released later this month.

"For the record," Mr. Groden wrote in iis analysis, "my visual inspection of the autopsy photos and X-rays reveals evilence of forgery in four of the photos," wo color pictures showing the back of the President's head and the same shots in plack and white.

Mr. Groden's analysis suggesting the possibility of an exit wound in the back of he President's head is supported by the worn statements of 10 doctors and nurses vho treated or handled President Kennely upon his arrival at Parkland Hospital n Dallas immediately after he was shot

November 22, 1963.

The Warren Commission based its Sepember (1964) conclusion that Lee Harvey Iswald was the lone assassin in part on intopsy evidence that indicated all the hots came from the rear. The House comnittee's reported conclusion also is that he only shots which hit the President ame from the rear.

Mr. Groden concludes that the alleged See KENNEDY, A5, Col. 1

## KENNEDY, from A1

forgery of autopsy photos was accomplished by the "matte insertion process," a technique well known in motion pictures and widely used in such films as "Superman: The Movie."

The process works this way: A small area is cut out of the larger backdrop film into which a new image is to be inserted. For instance, the skyline of the fictional city of Metropolis was the backdrop against which a horizontally outstretched Superman was imposed, giving the impression of flight.

The density of images around the edges, where one negative fits into the other, is reduced so they blend smoothly. One negative is placed on top of the other and a positive image is created from this insertion process.

Mr. Groden contends that the autopsy photos were forged in the same manner.

A photo showing part of the back of a cadaver's head, containing a small entry bullet wound, Mr Groden said, was inserted over that of a massive exit wound in the back of President Kennedy's head in an apparent attempt to conceal the wound caused by a shot from the front.

Mr. Groden's analysis of the autopsy photos was completed early last summer, before his September 7 testimony during the committee's public hearings. Mr. Groden said he was specifically forbidden to discuss the autopsy photos when he testified.

Committee sources said Mr. Groden's instructions were that he was not allowed to discuss any aspect of the case which had not been covered previously in the public sessions. As Mr. Groden was the second witness to be called-following former Texas Gov. John B. Connally-the autopsy photos were off limits in accordance with the committee's ground rules,

In mid-July, a staff member of the House assassinations committee discovered that one of the Kennedy files-containing the autopsy photos that were being kept in a combination safe—had been handled by "an unauthorized person," who apparently gained access to them surrepti-

Fingerprints were found not only on the plastic sleeves containing the photos, but also on the pictures themselves. Among them were the four photos which Mr. Groden contends are forgeries.

District of Columbia police traced the fingerprints to Regis T. Blahut, a Central Intelligence Agency officer assigned to assist the committee with CIA files needed for the assassinations investigation.

Police said Mr. Blahut's fingerprints also were found on X-rays of the President and on the so-called "magic bullet," which had been crucial in linking Oswald to the assassination.

A CIA spokesman said the agency fired Mr. Blahut immediately after the fingerprints were identified. The spokesman, Herbert Hetu, said the agency was satisfied that the tampering with Kennedy assassination evidence was "just a matter of personal curiosity."

Mr. Groden said he submitted his report on the alleged autopsy-photo forgeries to the committee during the last week of June-about two weeks before it was discovered that Mr. Blahut of the CIA had tampered with the same photographic evidence Mr. Groden had been examining.

"It seems like too much of a coincidence to me," Mr. Groden said over the wee tend.

At the close of its hearings last year, the House committee released its prelimimary finding that President Kennedy's death was "probably" the result of a conspiracy-that there were at least two gunmen

This conclusion was based on acoustical evidence-a recording from a motorcycl: policeman's radio-that at least four shots were fired at the presidential limcusine, one of which came from the area of Dealey Plaza known as the grassy

A stockade fence behind a line of thintrun:ted trees at the top of the knoll is locate I to the right and in front of the spot where President Kennedy was shot. The distance is about 100 feet.

The House committee, sources told The Sun, will conclude in its final report that the shot fired from the grassy knoll missed the President and the limousine altoge her, and that the alleged conspiracy invo ved organized crime rather than domestic or foreign intelligence agents.

"Even though that would have been the easiest shot of all," Mr. Groden said in an interview, "the [House] committee was forced to conclude that it missed everything because otherwise, they would have to explain why all the autopsy material failed to show that the President was hit at le ist once from the front."

""he mob is the new patsy," said a former committee staff member who disagree: with the upcoming findings

In his report, Mr. Groden writes, "The basic conclusions from all except the acoustics panel [of the House assassinations committee is that two shots struck the F resident from behind.

"()n the surface it would seem that the autopsy materials bear out this conclusion. That, however, may not be the case.

"There is evidence that raises grave questions about the authenticity of the item: being relied upon by the select committee and its panels. Moreover, there is medical data in the photos and X-rays that appa ently is being ignored. . . .

W th respect to the photos Mr. Groden says are forgeries, he writes, "Within the circumference of the President's head, there is an irregular line. [Outside] this line it is auburn and completely dry. Inside the line the hair appears to be wet and has less of a reddish tinge. In later generations [copies] of these photos, a large degree of contrast buildup becomes appa ent at the line's edge and the line becomes clearly defined. This phenomenon is chi racteristic of crop lines in matte insertion processes used for retouching and recompositioning of photos."

## Kennedy autopsy photos faked, technician says

Mr. Groden's allegation of autopsy for-gery is supported by the best known visual record of the Kennedy assassinationcade filmed by Abraham Zapruder from home movies of the presidential motor-

more than one assassin," he said.
