

9.5. Just got the Alamy stuff
this morning.

Andy

Fyvie:

See what you think of the
Alamy correspondence. From a quick
reading I glean the following: (1) His
shot times disagree with CBS published
times (2) What he did was not what
Wyboff did. (3) He seems to have
mistakenly put the screen in at range
 $\approx 250-300$ when it happened later.
(4) He doesn't recognize the significance
of pressure wave jiggles at 2 quadrants
313 - for a wave like that to wave
the camera then & only then the firing
height must have been different from
the other shot.

Note his graph sheets: His
jiggle is earlier, 182, but he mistakenly
places the bob in the tree earlier at 2175:
Humm!

If you can find any info on the
timing of the screen I'd be interested in it
& also any other mistakes he makes.
Chris, Fred
