Medical Evidence

In referce to the 7-28-77 memo disributed with a summary of the F.B.I.'s investigation of a bone fragment, please find attached the actual F.B.I. letterhead memo of 7-14-64.

Contrary to what Dr. Baden said in his Thursday presentation, the bone fragment was reportedly discovered at 5:30 pm on 11-23-63. (p.5)

Beyond the issue of the chain of custody and timing of the finding of the bone fragment, it would be usefull to solicit the Doctor's evaluation as to whether this allegedly occipital portion of bone is consistent with the x-rays. This is one aspect of the larger unresolved issue of impact debris.
