Dr. Cyril Wecht, Director  
Institute of Forensic Sciences  
Duquesne University  
Pittsburgh, Pennsylvania

Dear Dr. Wecht:

I thought you might find the enclosed of interest.

My present reconsiderations are two:

1. Further research indicates that bullet shock waves decay much faster than is indicated here, raising the question of just what Zapruder might have heard. I am still working on this problem.
2. My section on Thompson would be vitiated, and blur-analysis would be obliterated, if film could flutter laterally in the camera before the lens.

I would be most interested in your opinions of the enclosed, and any suggestions you might have.

Sincerely yours,

*George E. Rennar*
