

Confusion continued at Bethesda, as it had reigned at Parkland. F.B.I. agents submitted a report, later disclosed in Edward J. Epstein's book, "Inquest," which said they had heard one pathologist state that he had found a wound in the President's back, and could not find an exit.

The Warren Report version was explicit, that there was no wound in the back, but one in the neck. However, details of these published sketches tended to indicate that there was a wound below what could be described as the neck.

The photographs and X-rays which might clear up the issue were in possession of the Kennedy family, and only officially turned over to the Archives on October 31st, 1966 - with the provision that they not be made public for five years. Now, there the matter has rested until now. But Captain Humes, the Senior Pathologist at the autopsy, has since gone to the Archives and re-examined the X-rays and photographs. His conclusions we will hear later in an exclusive interview, the only one he's granted since that fateful night.

Why there were the telephone calls from the Naval Hospital to Dallas.

And, above all, why the photographs and X-rays and the spectrographic analysis are not only not in the twenty-six volumes appended to the Report, but are not even exhibits in the Commission's records?

Are these really questions?

Is there, in fact, now any basic question other than who the assassins are?

And have we anything less than the most odious event in our national history?

Excerpts from the FBI report

I. THE ASSASSINATION

President John Fitzgerald Kennedy was assassinated in Dallas, Texas, at approximately 12:29 p. m. (CST) on November 22, 1963.

At the time, the President was en route from Love Field to the Trade Mart in Dallas to address a luncheon sponsored by several civic groups. Among those in the motorcade with the President were

Street (Exhibit 1), three shots rang out. Two bullets struck President Kennedy, and one wounded Governor Connally. The President, who slumped forward in the car, was rushed to Parkland

Immediately after President Kennedy and Governor Connally were admitted to Parkland Memorial Hospital, a bullet was found on one of the stretchers. Medical examination of the President's body revealed that one of the bullets had entered just below his shoulder to the right of the spinal column at an angle of 45 to 60 degrees downward, that there was no point of exit, and that the bullet was not in the body. An examination of this bullet by the FBI Laboratory determined that it had been fired from the rifle owned by Oswald. (Exhibit 23)

Confusion continued at Bethesda, as it had relaxed at Parkland. F.B.I. agents submitted a report, later disclosed in Edward J. Epstein's book, "Inquest," which said they had heard one pathologist state that he had found a wound in the President's back, and could not find an exit.

The Warren Report version was explicit, that there was no wound in the back, but one in the neck. However, details of these published sketches tended to indicate that there was a wound below what could be described as the neck.

The photographs and X-rays which might clear up the issue were in possession of the Kennedy family, and only officially turned over to the Archives on October 31st, 1966 - with the provision that they not be made public for five years. Now, there the matter has rested until now. But Captain Humes, the Senior Pathologist at the autopsy, has since gone to the Archives and re-examined the X-rays and photographs. His conclusions we will hear later in an exclusive interview, the only one he's granted since that fateful night.

Why there were the telephone calls from the Naval Hospital in Dallas? And, above all, why the photographs and X-rays and the spectrographic analysis are not only not in the twenty-six volumes appended to the Report, but are not even exhibits in the Commission's records? Are these really questions? In short, in fact, now my basic question other than who the assassin was and how he did it, is: why the most odious event in our national history?
