

CBS Says Oswald Was Alone

NEW YORK (AP)—The Columbia Broadcasting System said Monday night that its own investigation of the death of President John F. Kennedy confirms the Warren Report's finding that Lee Harvey Oswald was the sole assassin.

The television network said in the second of a four-part series, entitled "The Warren Report," that there was no second gunman aiding Oswald, that the single-bullet theory was the most believable of any proposed and that President Kennedy was shot from behind.

ON THE broadcast, Navy Capt. James J. Humes, senior pathologist at the Kennedy autopsy at Bethesda Naval Hospital said after re-examining the X-rays and photographs that the shots which killed Kennedy came from the rear.

CBS said it interviewed eyewitnesses of the shooting and got conflicting reports on whether others shot at Kennedy. However, it could find no conclusive evidence of a second gunman, it said.

CBS said it tested the critical single-bullet theory, and found that one bullet may well have wounded both Kennedy and Texas Gov. John Connally, although Connally

insists he heard a shot before he himself was wounded by a second shot.

ON SUNDAY, in the first series, the network said its investigation indicated that the first shot was fired earlier than the Warren Commission believed and

missed both Kennedy and Connally. The commission said it was the first of three shots which hit both men. If the CBS finding was so, it would explain why Connally said he
