Dear Dr. Bhoads.

CDS65:24-7 is not identical with the atstement signed; by Richard Randolph Carr. Shile I on happy to have this and CD 339 (3597):29-30, I slso would like an exact copy of the original statement.

It should be in the Werren Commission files. If it is not, a copy is evaluable to you at the FRI, the agency of origin. I believe the attorney General's order of October 51, 1966, also requires that the original or an exact copy be in your custody and available.

I call to your ettention the fact that, in improper comment on the proceeding in New Orleans, the government of which you are part made available to the press and apparently misinterpreted what was represented in the press as the original etatement.

I further call towyour attention and to that of sayone to show you might want to direct it that the statement allegedly signed by Carr and allegedly quoted in CD 385 is not in accord with the report of Agenta Kasler and Mitchem, the other report cited above.

Thus, in eddition to the fact that I am entitled to an exact copy of the original evidence, it is further required to aliminate exconsons construction of the meaning I, as an analyst and writer, might derive from this featual conflict and possibly from the release to the press, during the course of a proceeding, of on ex-parts and apparently ineccurate commentary.

Does it not go without saying that the government, especially the FEI, should be envious to eliminate the possibility that its agents first presented an inaccurate account of what was said by the witness and then gave to the present during a court proceeding in one of the States, an inaccurate reflection of the evidence in its files?

It is probable I will be writing and publishing stout this. While I do not presume it was you or your agency that released this com entary to the press, I would welcome a statement from you saying you did not.

I do look formerd to a copy of Mr. Carr's original signed statement at the earliest convenience of the government.

Sincerely yours,

Herold Waisberg
