## U.S.Health Service Aided Army on Poison Weapon

By JOSEPH B. TREASTER

of Pennsylvania said today that fifties or early nineteen-sixtles. the United States Public Health Meanwhile, Richard Helms, a Service was "deeply involved" former Director of Central Inin the production of the deadly relligence, said; today that he shellfish poison that the Central had issued an oral command to Intelligence Agency has been half the C.I.A.'s biochemical storing for the last six years weapons program and to de despite a Presidential order stroy its stockpiles, but that he that blochemical weapons be had never followed up to find

Uson Blamphin, spokesman result of international treaties, for the Public Health Service, confirmed at a Senate hearing ment of biological and chemiteday that his agency had pro- cal weapons and the designa vided raw toxin to the Army, too of existing stockniles, which is believed to have done the laboratory work in prepart on intelligence learned from the ing the poison as a weapon.

"Indeed." Mr. Blamphin said, a suddle-level official in the

"this would be an improper agency had talled to destroy a

certain when the work was roday, done for the Army, but he said Senator Frank Church chairit was "sometime in the nine-teen-sixties." An aide to Sanator Schweiker said that he be Coutinued on Page 26, Column 4

WASHINGTON, Sept. 17 — lieved the work had been Senator Richard S. Schweiker started in the late nineteen-

that blochemical weapout that never fellowed up to find destroyed.

The Republican senator obeyed [Page 23]

Called this a "perversion of the late," showhiber, 1969, Public Health Service.

President Nifon, acting as a

role for the Public Health Servisupply of shellfish toxin as well ice in 1975. But at the time as a quantity of cobra vetom. we were involved, national policy recognized the development
of chemical and biological
weaponry and as a Federal
agency we had a role.

He said he could not say for
the posson in the hearings

White House Permission

A military spokesman said Fish Sanitation Station, Narrathat the Army had kept the poison for "defensive experimentation" and maintained that this fell within the limits of the Presidential order. Seniore Schweike and maintained that the seniore spokesman said he had not imported the presidential order. Seniore Schweike and the said that in the seniore spokesman said he had not imported the said that in the seniore spokesman said he had not imported the said that in the seniore spokesman said he had not imported the said that the sa ator Schweiker said that in mediately been able to deter-contrast to the C.I.A.'s action, the Army had retained its shellfish poison with the permission of the White House for use in research.

But Dr. Ritchie, one of the few scientists who have done research with shellfish toxin, said that the 2.8 grams held by the Army at its laboratory at the Edgewood Arsenal in Maryland far exceeded the amount of the substance that would noramlly be kept on hand in a single laboratory.

Dr. Ritchie said that, depend ing on the research being done, a typical year's supply for a single laboratory might range from 10 miligrams to 100 milli-grams. Thus, even if the maxi-

Continued From Page 1, Col. 7 mum were involved, the Army and the other Senators had re-required for suc hoursess, ac-

and the other Senators had re-required for suc hourposes, according to Dr. Ritchie. Senator Schweiker said the retained 10.972 grams of shell-fish poison in violation of the historia of the poison in violation of the historia of the poison in two cans about nine inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him inches high and six inches in diameter, or "about him six of a standard gallon paint can." He said the poison maintained a supply of 2.807 and packages inside, the cans, which were stored in a locked waulf.

Yale University, sald that that amount of the toxin if properly administered, could kill up to 5,000 persons.

White House Permission

second ,he said, was a tag read-ing, "Northeast Regional Shell

mine what work, if any, had been done in Narragansett, but he said that there had been at least one Army contract with the Taft Sanitary Engineering Center. He said that shellfish had been flown to Cincinnati from Alaska—where, he said, shellfish poison is endemic—and that personnel in the "milk and food research group"—had isolated the toxin from the shellfish.

The spokesman said that the

health agency had initially been interested in developing a standard testro see if shellfish beds were toxic.

The Army knew we wanted to do that and they wanted it for other purposes, obviously,"
he said. "So, they paid us to
do it. It is reasonable to assume that under the contract we produced more than would be needed for the Public Health
