2/10/95

Dear Randy,

Roger sent me copies of his fine brief and appendix. I found your affidavit quite impressive but I have a few questions for my own information and one of accuracy.

Memory can be fragile after so many years but I think that the head chart was by Finck. I think also that ^{CE} 388 was not prepared by both Humes and Boswell but that Humes testified that it was prepared by the medical artist under his direction, his direction consisting of his conveying verbally what he remembered, with no records of any kind before him.

On page five, in paragraph 9 you refer to metal fragments distributed ^{w/} widely throughout the right hemisphere. If you have anything on page reflecting their location other than the cluster of dust-like fragments near the front of the head I'll appreciate a copy. Aside from was it two that were retrieved I recall no others.

In paragraph 16 you say the fragments do not correspond with the trajectory of a bullet entering the rear near the EOP. Do you have a belief about what they do correspond with?

In next to the last line of ~~xxx~~ Paragraph 19 you say of the second head shot that it "was fired either from behind of the right front of" the limo. Did you mean "or"?

Have you examined the Zapruder film ~~any~~ at about ~~35x~~ 346 in which the back of the head is pretty clear? While I do not say that it reveals no shot impacting there it as I recall a close examination of about late ~~1966~~ 1966 or early 1967 no damage is visible on it and there is no blood visible on the back of his short collar. I am not disputing a second head shot. I postulated it in WWII and have come to believe it ^{le} even more since then. But I have trouble believing there was a second ^{entry} shot higher up on the ^{back of the} head that was not visible on the film. I examined the slides I forced out when they were not published as they were to have been, made from the original. They were projected for me on the ^A archives screen and thus the image was rather large.

Roger did an enormous amount of work. I hope he prevails, as he should.

best wishes,

Harold Weisberg
