7/13/70

Dear Howard,

Your letter of the 10th, enclosing Fisher's of 6/29, arrived this a.m.

Much of what you go into is now known to you, from mailings you had not yet received.

I will take the two new pictures to the camera shop this p.m. and have them copied for you and Dick. I also believe there should be as large an enlargement as possible of the hole itself, so I'll undertake that, too. I had not planned to make copies, but will. I'll let you and Dick know the cost after I get them back and mail.

As you can see, I addressed Kleindienst pretty much as you suggested. That letter should have reached you by now.

The Stone letter is one that was given me. I sent it on the chance some of its contents could interest you, whatever it was on the blacks. I do not need it back. It was given to me.

If you can write Skolnicj again, tell him you know how busy he must be, but you hope he can find time to complete your file, as with copies of the papers the government filed (where you might indicate an advance willingness or predisposition not to believe them and the kinds of excuses they might dream up) and repeat the request for the original press release, on the ground that it must be what contains the know-how you so much need and want to study. You see, it is not his, but you don't tell him that. It is by WCFL, and he must have a copy or copies.

That CE840 stuff could be great in the spectro suit! The rest of that paragraph is also of poential significance.

Little by little, we are accumulating an overwhelming answer to their argument that they must deny to protect. Some protection! And I'm pretty confident I examined the base before they took the pictures for Tink. Somewhere, my records will show when. There was nothing loose then.

Any indication <u>when</u> CE840 fragment disppeared? Like before panel(s)?

Dick shoulld be back from canoeing now, lucky fellow.

Best,
