

A it $2 y$ I wrote you eariler today, a Post reporter, Who rememioced tice llen foft report, pronised me a copy. So, hutl? I see in I get hit, dontt try there.
However, if "ou have a chanica to talk to those reporters or wrobably Detter, to Leigyatta, i"t would be goud to know if there are ayy others using initials or descriptions PST and SI, and a description of tie code ideatifications of the minor afonte. Ape lacy of rumbers, letters, combinotions, etc. I think you understand unt interest.

I have no psecial interest in connecting identifications With names, but is there is an apparent iink between them and coflices or citises, that could be interesting.

Ifs for example, such idecitilications are in mabers, it would ${ }^{2}$ e helpful to know ii' there is consistency, j.e., fove digit, filve difit, ank whatber theive is a difierence for PSLs and GIs in the numeitus syobem for these ategorios.

It may not be possibla to laam these things, but if it is, it can be quite inslorui.
