19-25 JB < 7

Are the 7 BHW duplications of 46 through 52 or just similar to 46-52 - does this mean 45 pix, or 52 pix, or, if the JB's are different negatives 63, or 70? Why are some without units, some with, some JB (B00) JTJB (600 B00) were these 7 taken after autopsy? If so, were they all taken after initial exam?
