

Pathologist disputes Warren report finding

Balt Sun (Sunday) 8/27/72, p4

Pittsburgh (AP)—A forensic pathologist who examined the records and materials of the autopsy performed on President Kennedy said yesterday that his accused assassin, Lee Harvey Oswald, could not have acted alone.

Dr. Cyril Wecht, Allegheny county coroner, said at a news conference a two-day examination of the autopsy materials at the National Archives in Washington convinced him that it was "physically impossible" for only one gunman to have slain Kennedy.

Dr. Wecht's findings directly contradicted not only the Warren Report conclusion that a single assassin was responsible for Kennedy's death, but also a report by Dr. George K. Lattimer, the first private physician to examine the X-rays.

At least two

Dr. Wecht said. "The fact is that the physical evidence shows that not any one person could have been a shooter. There had to have been at least two people shooting."

Dr. Wecht charged that the single-assassin finding of the lengthy Warren Report hinges on the theory that one bullet fired from a single gun wounded President Kennedy in the back seat of his limousine, and also wounded and passed through John B. Connally, then the Governor of Texas, who was riding in the front seat.

Dr. Lattimer made his report last January, about two months after the expiration of the Kennedy family's five-year ban on making the material public.

No doubt

At that time, Dr. Lattimer, chairman of the department of urology at the Columbia University College of Physicians and Surgeons, said there was no doubt in his mind that Kennedy was gunned down by a single assailant. He said the X-rays proved that the front and rear wounds in the slain president were caused by the same bullet which passed through Kennedy's body and then struck Connally.

Dr. Wecht disagreed. "The magic bullet theory is the sine qua non of the Warren Report," he said. "It is absolutely untenable from a scientific standpoint."

"I was quite amazed at the pristine shape of the bullet," Dr. Wecht said. "When one examines the bullet and the various films, there can be little or no question that that bullet did not traverse the body of two men."

Long-time critic

He declined to say how many gunmen he thought were involved.

Dr. Wecht, a long-time critic of the Warren Report, said he based his findings on an examination last week of X-rays,

photographs, films, bullets and bullet fragments.

He said several "extremely relevant" items—including microscopic slides and Kennedy's brain, which he said was to have been preserved—were not made available to him.

"Looking at the X-rays," he said, "I discovered a dark, brownish-black object inside the brain. . . Nobody ever mentioned this previously. Nobody ever described it."

A bullet?

He did not say if he thought the object was a bullet.

Dr. Wecht said he will submit to Burke Marshall, executor of the Kennedy estate, a proposal for a full review of the autopsy materials by a team of experts.

Dr. Wecht, who is also Director of the Institute of Forensic Sciences at Duquesne University, was granted permission by Mr. Marshall to study the autopsy materials.
