

# Warren Report Shortcomings Outlined

Shortcomings in the publicly announced portions of the Warren Commission report which dealt with forensic sciences were described by panelists at a session of the 12th Annual Meeting of the American Academy of Forensic Sciences in Chicago.

The panelists made clear that their review of the Warren Commission report on the assassination of President John F. Kennedy was not intended to be overly critical of its purpose and good efforts. They sought specific aspects and unanswered questions whose addition of information would have strengthened it.

**Autopsy Incomplete:** From the viewpoint of a forensic pathologist, Cyril H. Wecht, MD, LL.B., who is associated with the Pittsburgh, Pa., coroner's office, said, "By standards found in most good medical-legal investigative facilities, the autopsy report would not be deemed to be a complete one. Certain essentials are missing, and many questions have been raised and have gone unanswered, at least officially, because of the absence of such information in the official autopsy report and in the subsequent testimony given before the Warren Commission."

Among the questions which might have been publicly revealed through the autopsy findings, Dr. Wecht said, were: (1) If President Kennedy had Addison's disease (an issue raised in the 1960 presidential campaign), and (2) If the fire shot which struck the President inflicted a wound of such "fatality" that he could not have survived.

stated any portion of the data gathered throughout these observations in tentative submissions for the purpose of professional psychiatric opinion.

Dr. Tucker said that the Commission, "a body of outstanding attorneys, appeared to follow that practice common to a group of intellectuals of specializing in 'lay' psychiatry." He emphasized that he is "reluctant to accept the evaluation of critical and of significant witnesses interviewed by legal or investigative personnel whose training, however extensive, does not qualify them for the important task of evaluation of motivation."

**Weaknesses Check:** Attorney J. Roy Schwartz, Kenosha, Wis., was critical of a number of aspects in the handling of the case. He said, "The government is weak because it cannot establish a decent chain of evidence. It is weak because it spoke before it was ready. It is weak because it failed to maintain original notes. It is weak because all of the volumes of the report are based on assumption which must be taken on faith rather than fact. The [Warren] Commission inherited all of these weaknesses."

Schwartz made these observations: "It is worth mentioning that the Parkland

Hospital notes are probably not any original notes at all in evidence. Commission members had medical pathologists borrow the original notes, Police Captain Pitts, who became Chief Constable, Memphis, and Fred Agnew, who had worked in various State Police units, were given copies of the notes, during Oswald's 15-day period of investigation. One might have expected a thorough report to be made according to such a situation, but they were not."

"The Commission figured that there were between two and six shots fired, the latter given of the Commission is that there were three shots fired at the Depository Building. It seems that one shot, which was fired from the Presidential limousine, through the window through Oswald's back, chest, upper and thigh. He without including Dr. Hanes or Dr. Connolly believes that, probably, that the number of shots is disproved by a letter from the FBI given to Oswald. This in fact is based on an uncorroborated autopsy which set forth the words of witnesses and fact."

"If, in fact, there were four shots, Oswald could not have fired all of them. It is doubtful that he could have hit two out of three on the Commission contends he did. These matter marks men had difficulty in so doing, and there is no credible evidence that Oswald, who had missed a set-up on General Walker (if that testimony is believed) could compare with them."

"If the body and the limousine had remained in Dallas instead of being taken to Washington, D.C. in accordance with the law, Dr. Hanes, the FBI and the Secret Service need not have the responsibility they bear."

# Smokers' Death Rate Studied

Cigarette smokers among 250,000 U.S. veterans observed for more than 8 years of a 10-year study expected to have a higher death rate than non-smokers for lung cancer and every cause with the single exception of Parkinson's disease, the U.S. Public Health Service said.

Death rates for cigarette smokers were seen to remain fairly constant over the period, while rates for non-smokers went down. Findings of the nearly completed PHS study showed that, in the same age group, 11 times as many smokers as non-smokers died of lung cancer, and 13 times as many died of emphysema. Three or more times as many smokers as non-smokers died of cancer of the mouth, pharynx, esophagus or larynx, and such diseases as bronchitis, asthma, and stomach ulcer.

Study results showed mortality risk related to the amount smoked for each form of tobacco use. The risks for cigarette smokers greatly exceeded those for pipe or cigar smokers, and were lower for those who stopped smoking than for those who continued, the report said.

## AMA Annual Convention Section Registration for Members

The revised Bylaws of the AMA require that each qualified member register at the annual convention.

SECTION ON EXPERIMENTAL MEDICAL SPECIALTY (No limitation on areas of specialty)

SECTION ON MEDICAL SPECIALTY (No limitation on areas of specialty)

SECTION ON MEDICAL SPECIALTY (Special field of specialty)

**Lack of Information:** Dr. Wecht stressed, however, in this particular case, all of us are handicapped by not having been involved in the autopsies (with the exception of those few Armed Services pathologists who were called in to perform the autopsies). Consequently, we are limited in our evaluation to those portions of the record that have been made public through official sources.

"The only other medical facts that we have are those that were released by the physicians at Parkland Memorial Hospital in Dallas, where President Kennedy was taken and treated before being pronounced dead officially. Thus, we must preface any remarks, particularly any that may seem to be critical, with the caveat that we are not in possession of all the facts. Also, we can appreciate the fact that the pathologists who performed the autopsy, being members of the Armed Services, may not have been permitted to publicly release all their findings."

**'Conspiracy' Disproved:** Psychiatrist Maier I. Tuchler, MD, Phoenix, Ariz., pointed out that the Warren Commission report "put to rest irrational apprehension and anxiety created by the assassination of our President by a critical time in the nation's history." The findings reported, Dr. Tuchler explained, "are sufficiently detailed to negate rumors of a conspiracy," and they point to Lee Harvey Oswald as "a lone assassin."

But in his study of the past history of Oswald as developed in the Warren report, Dr. Tuchler said, he was "astonished to find that, of the 522 witnesses interviewed and of the thousands of reports presented to the Commission, not one psychiatrist

aged to register for the Annual Convention (Chicago, June 26-30) in advance, thereby indicating his or her selection of the Section Business Meeting in which he or she wishes to be qualified to vote.

The AMA Bylaws now read in Chapter VII: Meeting, Section 2, Registration:

(A) Members, A member's section registration shall correspond with his specialty or General Practice status as designated by him for classification in the American Medical Association Directory. To be accepted for section registration purposes, a member of a section who desires to change his registration from one section to another because of a change in his specialty, shall be required to inform the Headquarters of the American Medical Association by written notice of his intention at least sixty days [by April 26, 1965] in advance of the Annual Convention.

Each of the 22 Scientific Sections, with the matching medical specialties which will be recognized as identified in the AMA Directory Master Physician Records, is listed as follows:

- SECTION ON**
- AMA RECOGNIZED MEDICAL SPECIALTY**
  - Allergy**
  - Anesthesiology**
  - Dermatology**
  - Diseases of the Chest**
  - Internal Medicine**
  - General Practice**
  - General Surgery**
  - Internal Medicine**
  - Obstetrics and Gynecology**
  - Ophthalmology**
  - Otolaryngology**
  - Orthopedic Surgery**
  - Pathology and Pediatrics**
  - Physiology and Preventive Medicine**
  - Psychiatry**
  - Radiology**
  - Thoracic Surgery**
  - Urology**
  - Neurology**
  - Neurosurgery**
  - Plastic Surgery**
  - Preventive Medicine**
  - Psychiatry**
  - Radiology**
  - Thoracic Surgery**
  - Urology**

- GE—General Medicine (Subspecialty of Internal Medicine)
- GP—General Practice
- GS—General Surgery
- NS—Neurological Surgery
- PS—Plastic Surgery
- TS—Thoracic Surgery
- MS—May select Section on Diseases of the Chest
- CS—Cardiovascular Disease (Subspecialty of Internal Medicine)
- MS—May select Section on Diseases of the Chest
- IO—Internal Medicine
- OTO—Otolaryngology

- OB—Obstetrics and Gynecology
- OPH—Ophthalmology
- ORS—Orthopedic Surgery
- FOR—Forensic Pathology
- PD—Pediatrics
- PDA—Pediatric Allergy (Subspecialty of Pediatrics)
- PDC—Pediatric Cardiology (Subspecialty of Pediatrics)
- PM—Physical Medicine and Rehabilitation
- AM—Aviation Medicine (Special field of Preventive Medicine)
- GPW—General Preventive Medicine (Special field of Preventive Medicine)
- OM—Occupational Medicine

- PH—Public Health (Special field of Preventive Medicine)
- CE—Colon and Rectal Surgery
- DR—Diagnostic Radiology (Special field of Radiology)
- R—Radiology
- IR—Interceptive Radiology (Special field of Radiology)
- U—Urology

- NO limitation on areas of medical specialty
- CHP—Child Psychiatry
- N—Neurological Surgery
- NS—Neurological Surgery
- PS—Psychiatry
- OGC—Obstetrics and Gynecology
- OPH—Ophthalmology
- ORS—Orthopedic Surgery
- FOR—Forensic Pathology
- PDA—Pediatric Allergy (Subspecialty of Pediatrics)
- PDC—Pediatric Cardiology (Subspecialty of Pediatrics)
- PM—Physical Medicine and Rehabilitation
- AM—Aviation Medicine (Special field of Preventive Medicine)
- GPW—General Preventive Medicine (Special field of Preventive Medicine)
- OM—Occupational Medicine

Each qualified member physician can select only one Section Business Meeting in which he wishes to be qualified to vote. The above matching of medical specialties will be recognized for registration to vote in the Section Business Meetings, with the exception that any active member can request, at the time of his Convention Registration, to be permitted to vote in either the Section on Experimental Medicine and Therapeutics or the Section on Military Medicine. Registration can be changed annually.

Since the medical specialty of Administrative Medicine can be matched with all 22 Sections, a physician with this medical specialty listed in the AMA Directory Master Physician List can choose any Section Business Meeting in which he wishes to vote. This choice must be made at the time of his Convention Registration. Such registration can be changed annually.

An AMA Active Member may change his choice of a Section Business Meeting from year to year, so long as he meets the requirements of the AMA Bylaws. The registration form will appear frequently in *The AMA News* and *The Journal of the AMA* and the Convention Program will appear in the May 9 issue of *The Journal*.
