Dear Dick.

Here is the notebook you went to examine. while +k do not believe it will yith what interested you immediately, werhaps you will went to go over it for other purposed. Long time cince I did. The off the bidless I seem to recall is too the must have had another. There are no locals in it, if I recall. Persons this made the phone beek core important. That could be marked easily, and the marks transferred as new ones came out. But this seems too complicated and unnecessary. Therefore, I've resume there were critical. The enclosed, however, is all I have.

I'd asked "chu if no could neve a copy of finck's l.o. test. Thermo-fexed for me (he can not that icon mithout cost) before sending it along to fact for copying. The Thermofex, while not permanent of her along to about a third the space, to I can copy if with me when I bravel. I presume Poul will soon be making the copies.

Live sole Teal is yea do not pay him invendebely not to worry, you will. I'm hoping he has too spare cash to advance.

Going to DC Welmesday, missions Lil, and I expect to smand some time et the Archive, if Polygots into his office on time and we finish as expeditionally as he (not I) a poets.

Heard from my Miami can today. Let me 'mow scenest. I'll write him a general thing. Ferhaps he'll want to. We has a bright young wife who also might. This is all available in their library, you see. If accessary they can consult primary source.

East,

Harold:

Here is a matter that I forgot to include in mx the letter I sent nost recently. It concerns the number 110869 and its possible relation to 19106.

Intalking a while ago with a person who knew about codes, I learned that it was not possible to convert a 5-digit number into a 6-digit number without a key. That is, there is no cryptic system that can be applied unless you have reference to a particular key that applies only to the particular code being used. The result is that even if the two numbers are linked in the way I had suggested, there is no way of our knowing that they are linked— at least not on the basis if the two numbers themselves.

It occurred to me recently that in considering this problem we are looking at the wrong thing. We are looking only at the two numbers, when we should be looking for the key that might make it possible for us knxxxxxxxxxxxxxx logically to cinvert the 5-digit number into the 6-digit.

I searched through all the pages of IHO's notebdok, but could find nothing that I could apply to the numbers as a key. That wax did not surprise me, for the key might have been in IHO's nemory or even written down in some other place.

I think a search ought to be made of Shaw's address book. I would like to see the whole of the book-- all the pages and all writing on the covers. If you have a copy of the address book or can have a copy sent to me, would you please try to et it to my hands.

I don't know whether you have it or can get it, or whether you even want to probe this xx matter further. Lake up your own wind how much effort is justified. I think it much worth a look, for if there is a code involved, then Shaw would need a key nuch more than IMO would, and there is a possibility that they key is somewhere included in the same book that contains the relevant number. It's a very long shot, but a great cain if such an inquiry strikes pay dirt.

Let me know what you want to do with this, for I can't determine how much trouble it will be.

Still,

dick

Bernabei
