In this case, the distorted bullet, listed as Q64, did not bear sufficient microscopic marks of value for identification purposes. No photographs or photomicrographs of the test bullets obtained from the evidence rifle were made inasmuch as such photographs would not be taken in situations where it is not possible to effect an identification.

All the notes available concerning the firearms examinations of the evidence bullet, Q64, have been made available.

Two hours of agent time were utilized.

Dear Mr. Wiseman:

A Discussion of Calific 524 We 2157 struct New York, New York 10019 (212) 715 4321

## December 15, 1975

To confirm our telephone conversation: .

What CES News has been seeking, under the Freedom of Information Act, in addition to the material you have made available to us, includes:

1. Photographs end/or photomicrographs of the test bullets fired from the evidence rifle in the King case.

2. Analyses of the test bullets, comparing them in detail to the murder (evidence) bullet.

As I indicated to you, we have seen the test bullets and filmed them. But our anateur, eyeball examination does not give us the expert information we need.

As I also indicated to you, our ballistics expert, Lowell Bradford, having seen only a photograph of the evidence bullet obtained by Ray's defense attorneys, feels that identification of the bullet as having — or having not -- come from the evidence rifle — should be readily possible.

I await your call and your letter in reply.

Sincerely, Sunoz Alexan Frnest S. Leiser Senior Producer
