

292, 6/26

'aft lon fun in conspiracy -
hurry - p. 19 report
Smith - bullet theory
+ H. M. M. 's most following account
I guess - bullet theory
2 days passed in committee with Phillips

Altman
Jacks - "What" "I turned + looked up
behind me" at corner of RR
floor window

Wright - he not asked right
question's etc, I think not consistent
with that theory
Wright was quiet but in on syllabus
to hunt

Perry - woman of jury - note mark -
witness of not asked right question's
his face influence part of his role
source of such hunt.

2-21. Hume "alumniated" pictures
he ~~was~~ was ~~you~~ you ~~then~~ before.

The Potha questioning is as
though directed by defenders of
communism but to elicit information
but to put it in communism.
"What" not to be "because"!!
not for? Some of this asks a
question the question is raised.
"Since that time we have had
an opportunity to examine Potha."

Don't say "yes" but Potha
said a word like "I am in it"
The photographs ~~show~~ also
said "I am in it" - also ~~for~~
Ead witness "inside but being
said that came from Potha
do not, write Potha who said
~~otherwise~~ otherwise + there are
so many.

2-3 | Spitzer - "just in sight" in
Horned just in my.
3 bullets hitting - 1st 186 then
normally at 228-9 then found
at 313 - But how about (Jaguel)?

Trankinson - would not fall if
bullet had struck in it.

Wood & Oliver so small part -
did not fall when hit - to see
how far "the 6.5 bullet would
penetrate" blocks of gelatin do
represent chest - no trace in
it. Messner in photo do see where
bullet do gelatin.

one bullet would have passed all wounds?
No showing of bullet after (B)
did this. Who designed test? Oliver
Oliver who has his on record do up-
held. do Messner Messner Messner
of time? And why name in chart?

2-4.1 trajectory of "bullet" ~~was~~
"almost identical" with that
of 0's - they did not know the
trajectory of my bullet.
