

ANOTHER WIND ONE!

"Investigator" Claims Oswald's Double, A Russian Agent, Assassinated Kennedy

A former attorney believes he has proof that Lee Harvey Oswald did not murder President John F. Kennedy.

Michael Eddowes, a 74-year-old retired London lawyer, claims the man responsible for the assassination was a Communist impersonator.

Eddowes spent 12 years investigating and researching the evidence pertaining to the death of Kennedy.

According to the Warren Commission, Lee Harvey Oswald defected to Russia as a 19-year-old Marine and returned to the

U.S. in 1962.

Not so, says Eddowes. It was not Oswald who re-

turned to his homeland. Instead, a trained Russian assassin, who had been turned into Oswald's double, entered the country for the express purpose of killing Kennedy.

He adds that the Russian agent had been so carefully made over that he fooled even Oswald's mother and brother.

But they had been "conditioned" to accept some physical changes in Lee Harvey, Eddowes explains. Transitional photo-

graphs were sent to them often during the three years he was away.

Eddowes says the proof of his hypothesis lies in a grave at Fort Worth, Tex.

The body buried as Lee Harvey Oswald is two inches shorter than the 5-foot 11-inch ex-Marine.

The London man also claims that an autopsy revealed no scars as evidence of a mastoid operation, which was performed on the real Lee Harvey Oswald at age 6.

Dr. Earl Rose, the Dallas County Medical Examiner,

who performed the autopsy on the body of Kennedy's assassin, reportedly acknowledged the height difference.

"It would seem to me that a man of his age should not have lost two inches," he is quoted as saying. "That's a little too much."

He reportedly claims that he might have overlooked the mastoid scar.

If, in fact, a Communist assassin lies in the grave in Fort Worth, Tex., where is the real Lee Harvey Oswald? Is he still in Russia? And is he alive ... or dead?
