

Memorandum

TO : MPT-316hr

DATE: March 6, 1964

FROM : C. D. DeLoach

SUBJECT: THOMAS GETTINGS BUCHANAN, JR.
INTERNAL SECURITY - C

Reference is made to my memorandum to you dated 3-4-64 in captioned matter pointing out Buchanan had written in the Paris newspaper, L'Express, to the effect Lee Harvey Oswald was an informant of the FBI. Jerry O'Leary of the "Star" had stated Buchanan formerly worked for the "Star" and is now in Paris. The Director stated, "O.K. Also give to O'Leary the release re Oswald and Ruby not being in FBI." While, of course, we will follow meticulously the Director's instructions, it is believed the Director may desire that we give the same release to United Press International and Associated Press representatives here in Washington. In this way, we would achieve a greater dissemination of the release and thus set to rest throughout the Nation the rumor Oswald and Ruby were connected with the FBI.

RECOMMENDATION:

That the Director permit us to simultaneously give the same release to United Press International, Associated Press and O'Leary of the "Star."

SUBJECT: ASSASSINATION OF PRESIDENT
JOHN F. KENNEDY, DALLAS,
TEXAS, 11/22/63

Handwritten notes:
76
Seymour
B...

As you will recall the Dallas Office recently submitted the three bullets from Officer J. D. Tippit's body which had been obtained from the Dallas Police Department. The Laboratory has completed the examination of these bullets and the results are set forth below. The President's Commission is being advised of the results by letter and is being furnished photographs of the bullets. The Dallas Police Department is being furnished a report of the results. The Dallas Office is being given a teletype report as well as a copy of report to Dallas Police Department along with photographs of the evidence.

The three bullets are .38 Special bullets which had been fired from a barrel rifled with five lands and grooves, right twist. A portion of the surface of each bullet is mutilated; however, microscopic marks remain on these bullets for comparison purposes. The bullets were compared with each other and with test bullets obtained from Oswald's revolver. No conclusion could be reached as to whether or not these bullets were fired from the same weapon or whether or not they were fired from Oswald's revolver. In addition, it was found that even consecutive .38 Special bullets test fired from the C15 revolver could not be identified with each other. In this connection, it should be noted that the barrel of C15 was designed for .38 S & W bullets and, therefore, it is slightly larger in diameter than barrels designed for .38 Special bullets. Firing of undersized bullets could cause erratic passage of the bullets down the barrel, resulting in individual microscopic characteristics which are not consistent. The barrel of the weapon could also be changing due to the accumulation of lead in the barrel or to wear.
