

8/31/84

Richard Gallen
260 Fifth Ave.,
New York, NY 10001

Dear Richard,

What ever was or is or may have been in your mind remains the mystery to me that you so clearly intended it to be.

From time to time I've wondered, tried to understand, tried to figure it out, and I've not been able to.

One thing that came to mind is the possibility that you somehow believed, well as you knew me, that I was making a special kind of emotion^{al}/appeal in saying that I wanted publication while I am still alive, particularly to face any criticism.

I had to obtain the enclosed report on Doppler examinations of the circulation in my legs for a consultation in Baltimore. Before it is refiled I send it to you ^{as} ~~are~~ one of the evidences I was truthful to you and reflected the actualities.

In simple English, as explained to me, it means the arteries in my legs are not working, includin~~g~~ the left arterial bypass.

Sincerely,

Harold

ORDER #: 0707-0013
ORDERING DR: HICKEY, TIMOTHY F

MED REC #: 0432182
LOCATION: VL STATUS: REG REF
AGE: 81 SEX: M WT: lbs HT: ft
ADMIT DATE:
ORDER DATE: 07/07/94
ORDER TIME: 1347

DX:
VASCULAR DIAGNOSIS/INDICATION: DVT R/O DVT
DATE OF SERVICE: 07/07/94

FINDINGS: DOPPLER VENOUS STUDY WAS PERFORMED BILATERALLY FROM THE COMMON FEMORAL VEIN TO THE POSTERIOR TIBIAL VEIN. DIRECT IMAGING SHOWED NO EVIDENCE OF DEEP VEIN THROMBOSIS WITH NORMAL CALIBER OF VEINS WITH NORMAL COMPRESSIBILITY. DOPPLER FLOW SHOWS INCOMPETENT LEFT SUPERFICIAL FEMORAL AND LEFT POPLITEAL VEINS WITH OTHERWISE NORMAL DOPPLER FLOWS.

INTERPRETATION: 1. NO EVIDENCE OF DEEP VEIN THROMBOSIS. 2. MILD INCOMPETENCY OF LEFT SUPERFICIAL FEMORAL AND POPLITEAL VEINS.

INTERPRETING PHYSICIAN: RIULI, EDWARD

ADMIT DATE:
ORDER DATE: 07/07/94
ORDER TIME: 1347

DX:
VASCULAR DIAGNOSIS/INDICATION: CL CLAUDICATION
DATE OF SERVICE: 07/07/94

FINDINGS: SEGMENTAL PRESSURES WERE PERFORMED BILATERALLY FROM THE LOWER EXTREMITIES. HISTORICALLY THE PATIENT HAD LEFT FEMORAL POPLITEAL BYPASS GRAFT IN 1980. SEGMENT PRESSURES SHOWED SEVERE DECREASE IN ANKLE/BRACHIAL INDEX OF THE RIGHT OF .51 AND ON THE LEFT .43. MAJOR DECREASE IN PRESSURE OCCURS ACROSS THE LEFT ILIAC AND COMMON FEMORAL SYSTEM WITH FURTHER BUT LESS SIGNIFICANT DROP ACROSS THE LEFT POPLITEAL ARTERY SYSTEM. ON THE RIGHT MAJOR DROP IN PRESSURE OCCURS ACROSS THE RIGHT SUPERFICIAL FEMORAL ARTERY WITH LESS PROMINENT BUT FURTHER DROP IN PRESSURE ACROSS THE DISTAL ARTERIAL BEDS.

DOPPLER FLOW WERE NORMALLY TRIPHASIC IN THE RIGHT EXTERNAL ILIAC ARTERY WITH MONOPHASIC FLOW FROM THE RIGHT COMMON FEMORAL ARTERY TO THE DISTAL ARTERIES. MONOPHASIC FLOW WAS NOTED IN THE LEFT EXTERNAL ILIAC, COMMON FEMORAL, POPLITEAL AND POSTERIOR TIBIAL ARTERIES. THERE WAS NO FLOW FOUND WITHIN THE LEFT SUPERFICIAL FEMORAL ARTERY NOR ON THE LEFT FEM-POP BYPASS.

INTERPRETATION: 1. SEVERE BILATERAL MULTI-LEVEL ARTERIAL OCCLUSIVE DISEASE WITH PROBABLE TOTAL OCCLUSION OF THE LEFT SUPERFICIAL FEMORAL ARTERY AND PROBABLY SIGNIFICANT BLOCKAGES IN THE LEFT EXTERNAL ILIAC, BILATERAL COMMON FEMORALS, RIGHT SUPERFICIAL FEMORAL.
2. TOTAL OCCLUSION OF LEFT FEMORAL, POPLITEAL BYPASS GRAFT AS NO FLOW WAS FOUND.
3. SEVERE BILATERAL SMALL VESSEL DISEASE EVIDENCED BY DECREASE TOE PRESSURES BILATERALLY .47 ON THE RIGHT AND .50 ON THE LEFT .

① Venous studies pretty much ok for now
② severe occlusion arteries both legs no flow in graft
③ recheck
