

This is a xerox of an enlargement of the shirtcollar FBI picture I got from Käein-
diest. I've marked the extremities of the slits ^{in kcal} so you can see they not only do not coin-
side- the side toward the nurse is longer. The other one has a pronounced curve, not
possibly from a bullet of only a tiny bit more than 1/4 inch in diameter. This enlarge-
ment eliminates the FBI identification in the middle above what is shown here.
