Denr Gewry and Denis, 3/25/95
I've thowht a liftle about tio book you plan. I wresune you intend offering It tio a univoraity press but what cone to mind would be appropriate elsewhere. hat did cone to mind is the prejudice a/jainst the subject matter and a possible meqns of nddressine that in advance。
${ }^{1}$ our paper draws heavily on, wy work and on Sylvia's. The record with regard to I believe both and I'm certain mein is that not a sincle person has wfitten or phoned we to complain that I was unfair to him or inaccurate in what $I_{\text {f }}$ wrote about hime after 30 yeure and all I wrote about. Jerry has gone over all of Sylvia's papors at Itood and can tell you whether she got any complaints and if so what they wefe.

On any subjoct this is, $\perp$ think, an erceptionan record that should mean *omething to any with open minds:

Ind as it haplens the records of both are fred have been onen to dunpection b Rhyon".

If you use your naper as a sumizission for consideration you can add something like the above to it in one of the notes. There it mieth also serve a purpose if and When you submit the paper for publication.
$L_{i l}$ seens to be recoverinc; well although with little interest in food. She has had a potato or two, jello, of which I cot her a half-dozen more flavors yebterday morninh and last evening she took a slice of plain bread, nothing on it, whole-wheat. In the early-inorninf; shopmins I sav a fine buy in potted hearty mums for 31.98 instead of four dollars more, so I took her to get the one she wanted, to the bank and she sent with me when + did my p.t. She jes oK enouch now for we to take my usual morne inc of walline before the lab oppens and p.t. aftor it.

We think she nay ent rice so for lunch today or tomorrow we'11 go to Hana's where the'll eat only plain rice and that will keep Hicole from worrying when she does not see idil for a while, until this diet is over.

Or, I guess we were luclay.
