# Graphics reporting

### the JFK assassination lisual evidence

Wendy Govier KRIN Graphics Network

he assassination of John F. Kennedy continues to be the most talked about news story of this century.

Looking back at the coverage of the day, we discovered that few graphics were done—just simple locators. Craphics for special amiversary sections in 1988 reflected the official

version of the story, Yet 80% of Americans of version of the story, Yet 80% of Americans don't believe the official story.

We decided to do a graphic about why the government version, the Warren Commission Report, is generally not accepted. We wanted to compare the official story with the critics version, looking at the best evidence. What information had surfaced, been dug up or leaked out about the case over the years?

As we began the research, we discovered the most visual story of the century. Although photo images from that nevent are branded in many of our memories, numerous graphics showing physical positions, builet trajectories, and medical evidence were used to build both the official and unofficial cases. In fact, Runost of the evidence was visual. And the majority of the research was an analysis of his property of the critics included from the story of the critics included from the story of the evidence was visual. And the majority of the research was an analysis of his property of the critics included from the story of the evidence was visual. And the majority of the research was an analysis of his property of the critics included from the story of the critics included from the story of the critics and the story of the critics included from the story of the critics and the story of t pathologists, photographic experts, architectural draftsmen, film archivists and

## Resources for the JFK graphic

computer image analysts. Those who weren't visual per se, used visuals to explain their theories, as did the authors of the official story. We began to follow the graphics trail.

The official stary

The official Warren Commission Report
stated that 3 shorts were fired by one
assassin, Lee Harvey Oswald, from the 6th
floor window of the Texas Book

Medical evidence

reports:

1. Parkland Hospital, Dallas documented a large head wound that documented at the rear of the head, and a tiny entrance wound at the throat on top of which doctors performed a tracheostomy to save his life. The back wound was not

2. Bethesda Naval Hospital in Maryland documented a major exit wound at the right temple, and a back wound, 1"-2" in depth, with no bullet inside, and no point of exit. The throat wound was not

8. Bethesda revised the final autopsy.
Contest the back wound several inches higher, and claimed the bullet that entered the higher, and claimed the bullet that entered the higher, and claimed the bullet that entered the higher, and claimed the wounds of the wounds that he could not be accurate because he did not have access to x-rays or photos, and never the wound in his work a could not be accurate because he did not have access to x-rays or photos, and never the wound in his work and the body. The wound in his autopsy face sheet locates the wound in his shows a bullet hole 5 3 /8 Febory the top of the collar. But the final Bethesda autopsy inches. The Warm Commission concluded that JFK's jacket was riding the position of the bullet would be shown the count his shirt, held in place by a tight collar and tief JFB Exhibit 69 if the collar was the corresponding bullet hole in his

the wounds they saw.

The most anasting visual is an 8 mm home movie of the assasination filmed by Abraham Zapruder, standing near a grassy knoll. Analyzing the film with photo enhancement, researchers like Robert Groden and Richard Sprague were able to time the shois to match farmes of the film. In a slow motion version, the fatal head shot pushes Kennedy back and upward at over 100 miles per hour. Pieces of his skull

Depository. According to critics, this conclusion was based on false witnesses, a planted gun, altered photos, and a convenient trail of evidence.

Records show 3 conflicting medical

Autopsy photos and X-rays are officially locked away for 50 more years. Drawings of those photos by Ida Dox were used by the House Select Committee on Assassination in 1976. Witnesses at Parkland and Bethesda say these are not

Zapruder film

KRTIN's graphic

KRTIN's completed graphic shows what

We determined to be the best evidence:

e yeevitness accounts, a diagram of shots

fired, conflicting medical reports, the

stagic Builet, and a fact box. The graphic is

available in the KRTN Graphic Library.

were found 25 feet to his left rear, and motorcycle officers to his left rear were hit with such force by bone and gray matter that they thought they had been shot.

Humber of gun shots

The sequence of shots lasted just over 6
seconds. The official murder weapon could
be fired only 3 times in that period. The
Warren Commission says 3 bullets were
fired. One was the final head shot. One
shot missed (2) feet to right, 33 feet
overhead, 170 feet beyond), hitting the
curb and wounding bystander, James
Tague. A third shot, known to critics as
The Magic Bullet, caused 7 separate
wounds in JFX and Connally.

CE-399 or Magic Bullet theory

Commission Exhibit 399, or The Magic
Bullet, was add to have hit JFK in the back
of his neck, exited his throat, entered
Connally's back, broken his fib, exited his
chest, entered his forearm, shartered his
radius bone, exited his wrist and looged in
the strigh. Then it fiel out onto a Parkland
d hospital stretcher. Critics say the trajectory
be bullet would take to make all these
wounds is impossible.
Aside from problems with the trajectory
the bullet itself was found in such nearperfect condition that the Warran
Commission performed a test. A similar
bullet, fired once through a cadaver's
util, was severely deformed. Medical
researchers have determined from x-rays
that more metal remains in Connally's
body than is missing from the bullet.

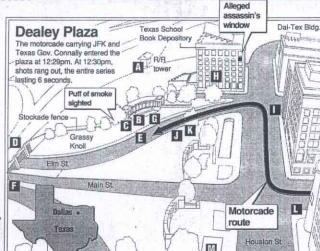

Another film shoos witnesses running toward the grassy knoll just after the assassination, Josiah Thompson's exhaustive research produced a chart of tis 191 witnesses, where they were standing and what they saw and heard. Some 80% of the witnesses in Dealey Plazar that day of though shots came from the knoll to the right front of Kennedy.

SULDI OF THE The JFK assassination: One gunman?

Some Americans question the Warren Commission findings about the assassination of President John F. Kennedy in Dallas on November 22, 1963. The Commission, appointed to investigate the murder, reported that Lee Harvey Oswald, a lone assassin, fired 3 shots from the Texas School Book Depository (TSBD). Some independent researchers disagree, basing a case for other gunmen and/or shots on some of the following information:

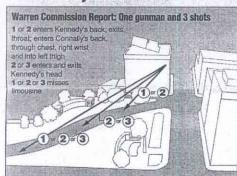

=Eyewitnesses =

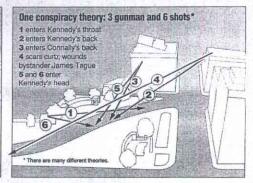

- A Lee Bowers saw cars & 2 men with radio phones behind stockade fence
- B Abraham Zapruder said shot came over right shoulder
- B Emmett Hudson heard shots above and behind him
- 1 S.M. Holland saw puff of smake on grassy knoll
- Forrest Sorrels, in lead car, said shot came from knoll
- F J. Tague hit by piece of curb from stray bullet heard shots from Knoll
- The Newmans dropped to ground; said shots came over their heads

- Many TSBD office workers heard shots from knoll
- James Crawford heard shots from knoll
- Officer Hargis, behind JFK, said shot came from knoll; snattered with blood. he led chase up knol
- K Paul Landis, Secret Service agent, said last shot came from knoll
- Deputy Weitzman heard shots from knoll; found 8-12" piece of skull on Flm St.
- J.C. Price, on roof of Terminal Annex Bldg., saw man run to railroad cars after he heard volley of shots

How many shots?

### Medical Reports

### Parkland Hospital (Dallas)

Physicians found a massive "exit" wound at the back of the head, with part of the skull missing. A tracheotomy was performed over an "entrance" wound at JFK's throat; back wound was not examined.

### Bethesda Naval Hospital (Maryland)

The autopsy documented a major "exit" wound at the right temple and a back wound short in depth (1"-2") with no point of exit. The throat wound was not examined.

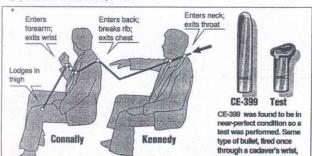

### Bethesda Naval Hospital (Maryland)

A revised version, relocated the back wound several inches higher and claimed the bullet exited at JFK's throat and proceeded through Connally. Early autopsy notes were destroyed.

### CE-399: The Magic Bullet

Commission Exhibit 399 or "magic bullet" was found on a stretcher at Parkland Hospital. The Commission contends that this bullet, virtually undamaged, passed through Kennedy and Connally, causing 7 separate wounds. Researchers contend the zig-zagging flightpath, shown below, was impossible:

Did You Know?

- Oswald was given a nitrate test on the night after the shooting. Results showed he had not recently fired a gun.

  Julia Ann Mercer, caught in traffic on Elm St.,
- saw a man get out of a truck and carry a rifle up the grassy knoll. Later, she identified the driver to the
- FBI as Jack Ruby.
   510 photos were taken by 75 photographers in Dealey Plaza in the hour before, during and after the shooting. Warren Commission examined 26 photos; FBI examined 50.
- 16 of the 20 Dallas sheriffs deputies in Dealey Plaza believed shots came from the knoll and ran in that direction.

  ■ Governor Connally's clothes were dry cleaned.
- destroying evidence. Oswald's mother insisted that he was a U.S.
- Intelligence agent.
- There is more metal remaining in Connally's body then is missing from Commission Exhibit 399, the magic bullet.
- Kennedy's brain is missing from the National
