

Now here we have the one rifle to the ^{ex}clusion of all others ever made, found at the scene of the crime and allegedly its only cause and lo we have FBI worksheets, it without the requisite scientific data and the record of the testifying of about a dozen entirely different rifles. Why?

Why without cause? Why when from the first day there was alleged to have been this one rifle used and no conspiracy?

This is followed by an FBI worksheet of no more than manufacturers can supply about the eight of the powder. Why no analyses? This is that has meaning.

The next pages shows no marking of the clip with which the rifle was loaded.

Other markings that are not essential but not these that are essential. In fact, there is no provided FBI paper that says the clip was in the rifle, the sole purpose for having it and the essential for operating it.

Comparing empty and today unidentifiable shells means nothing. Empty shells do not kill. Bullets do. But there is no single meaningful test on the fatal slug.
