

12/12/95

Dear Bill,

Thanks to you we now have no shortage of supplies and should not for a while.

If I have heard nothing from Drs. Aguilar and DeSalles so I do not suggest making a copy of the manuscript for them now. Verb is expecting a copy. If I did not give you his address, it is PO Box 421815, SF 94142-1815.

If you want to get records from the Dallas city archive or from the National Archives you have to specify what you want so they can identify it.

The address of the Dallas city archive is as of my last knowledge Ms. Cindy C. Smolovik, Archives manager, Dallas Municipal Archives and Records Center, City Hall, 752014.

The JFK part of the National Archives is among the parts moved to a new building on the campus of the University of Maryland at College Park, Md. I do not know the zip code but I think if you write The National Archives, College Park, MD it will reach them. *specify JFK archive*

I have never been to that building and have never spoken to any of the new people they have working on that archive.

Glad your gotten into Post Mortem.

I was impressed by that hitney catalogue and as I wrote you, wonder whether 180 watts will be enough. Lil has written them for me to learn and to ask if they have one that puts more out.

In this area December is usually relatively mild for winter but this one is a rough one. The windchill yesterday morning was 25 below, *gusting* colder. I cannot be out in such weather and skipped the Monday blood test until today. Little wind and only 20 when I left. But I let the car run for 15 minutes before leaving. Hil was with me, and after the blood test I saw a new orthopaedic surgeon about that rightside weakness. She confirms that, believes it has a neurological involvement and is to confer with a neurologist and make an appointment for me. She is also going to confer with my physical therapist next week. He is away this week. But the point I started with is that after 15 minutes the defroster setting, which also directs heat to the floor, was doing that but it was a while longer before I could get heat from the other settings. We made out OK, though.

We are not uncomfortable in the house but we are pretty much confined to it.

As long as the electric lines stay up we'll be OK. We need the juice for the furnace and to get water from the well.

Thanks and our best,

*Hand*
