2	THE COURT:
3	I trust you gentlemen enjoyed your lunch
4	today.
5	Is the State and Defense ready to proceed:
6	MR. ALCOCK:
7	We are ready.
8	MR. DYMOND:
9	Ready, Your Honor.
10	THE COURT:
11	Call your next witness.
12	MR. OSER:
13	The State would like to note for the
14	•
15	record that in light of Time, Inc.,
16	on the return of the subpoena, the
17	subpoena called for 35 millimeter
	slides of Frames 200 to 320, and
18 •	after checking the return made by
19	Time, Inc., the State learns that
20	Frames 234 through 244 are missing.
21	This is a check by Mr. Alford and my-
22	self.
23	THE COURT:

23	BY MR. OSER:
.4	Ω Doctor, would you define for us what is known
	as the field of Pathology.

· .

Well, the field of Pathology, as I interpret А it, consists mainly of making microscopic diagnoses on patients, tissue removed from human patients in order that the surgeon may tell the patient he has a cancer and treat him appropriately or tell. him he has a benign disease and treat that appropriately. I suppose that pathology is really divided into some subsections too, that would be forensic pathology, which deals with the acquiring of evidence with which to determine whether or not a crime has been committed and if a crime has been committed, then to assist in apprehending, convicting, the guilty, and acquitting the innocent, although there is another branch which I am relatively ignorant, this is clinical pathology and this consists mainly of running the blood bank and chemical tests on the blood and urine and things as that in the hospital, and I profess no degree of proficiency in that. Now, Doctor, am I correct in stating that you Q deal with the area of forensic pathology?

14	A President Kennedy is probably reacting to pain
15	in his neck.
16	Q Doctor, in those three exhibits that you now
17	hold, do you have any opinion as to the

8	He being a forensic pathologist, wouldn't

21	THE COURT:

the sake of completeness it requires taking gross photographs of the body for identification, for the position of wound, such things as that, and then it involves a dissection, getting out all of the parts involved, and it includes fixing the tissues in formaldehyde to allow them to become hard, and after they become hard we dissect these very carefully using sometimes a low-power microscope, and we separate and submit the appropriate parts to technicians to make slides, and after the slides come back we study them under a microscope. In the case of a brain, it is necessary to fix the brain in formaldehyde for two weeks until it becomes hard, to dissect, and if you try to dissect a fresh brain it falls apart, putting the whole thing together at the end.
